Mutual Assurance with Moderate Premiums.

Scottish Provident Institution.

Established
1837.

Incorporated
1848.

HEAD OFFICE: 6, St. Andrew Square, EDINBURGH.

THE PREMIUMS are so moderate that at usual ages for Assurance **£1200** or thereby may generally be secured from the first for the yearly payment which would elsewhere assure (with profits) **£1000** only—the difference being equivalent to an immediate and certain Bonus.

EXAMPLES OF PREMIUMS FOR £100 AT DEATH—WITH PROFITS.

Age next Birthday.	25	30*	35†	40	45	50
During Life	£1 17 5	£2 2 4	£2 8 6	£2 16 6	£3 8 2	£4 3 2
25 Payments	2 9 8	2 13 11	2 19 3	3 5 11	3 15 11	4 8 8
15 Payments.....	3 7 5	3 13 2	3 19 11	4 7 11	4 18 6	5 11 2

* A Person of 30 may secure **£1000** at death by a yearly payment, *during life*, of **£21 3s. 4d.** Or he may secure **£1000** by 25 payments of **£26 18s. 2d.**, being thus free of payment before age 55.

† At age 35 the Premium *ceasing before age 60* is, for **£1000**, **£29 12s. 6d.**, being about the same as many Offices require during life. To Professional Men and others whose income depends on health, the limited payment system is recommended.

THE WHOLE SURPLUS goes to the Policyholders, on a system at once safe and equitable,—no share being given to those by whose early death there is a *loss* to the common fund.

The Surplus at the latest Investigation was **£1,581,000.**

Over 60 per cent. of the Members who died during the last Septennium were entitled to **Bonuses**, which, notwithstanding that the Premiums do not as a rule exceed the non-profit rates of other Offices, were, on the average, equal to an addition of over 50 per cent. to the Original Assurances.

ACCUMULATED FUNDS, £14,000,000.

ENDOWMENT ASSURANCES WITH PROFITS—SPECIAL CLASS.

Prospectus with full information on application.

These rare cloths—besides having an extensive sale at home amongst those who value a good article, and are willing to pay the cost at which alone it can be produced—are exported regularly to all parts of the Continent, Egypt, South Africa, United States, Canada, India, China and Japan, Australia and New Zealand, West Indies, South America and Falkland Islands, &c.—qualities exactly suited to the different climates. Now that **shoddy** materials are so abundant everywhere, the opportunity of obtaining these sterling goods so easily and inexpensively by means of the Parcel Post system should be highly appreciated; and friends of colonists at home not already acquainted with them should particularly note the address and make a visit of inspection whenever possible.—W.B.

31, GREAT PORTLAND ST., W. (18th year)

Wholesale, Retail, and Export.

Description of some of my Standard Goods. Detailed Catalogues on application.

IRISH FRIEZES (strong, rough **TWEEDS**). These are *par excellence* the Cloths for **Country Suits**, for **Travellers**, for **Sportsmen**, and for **Cold Climates**, being substantial, warm, pliable, hard-wearing, and almost weather-proof; made in various mixtures; dark and light, plain and plaids. Make also most useful and comfortable Ulsters. Price 3s. and 3s. 6d. yard, 28 inches wide.

IRISH HOMESPUNS.—These, like the **FRIEZES**, are admirable for Gentlemen's Country Suits, Fishing, Shooting, Golfing, &c.; but lighter in weight, and more loosely woven. 28 in., 3s. yd. upwards.

Very stout **IRISH TWEEDS** for rough country wear at home or abroad. 2s. 9d. to 3s. 9d. yard. Splendid for Farmers, Gamekeepers, Mechanics, and Settlers in cold climates.

Extra thick **FRIEZES**, plain, plaid, and napped, for heavy travelling, driving, and motoring Ulsters, double width, from 6s. 9d. to 12s. 6d. yard; also the warm, soft, and woolly Duffle Friezes.

Useful and substantial **TWEEDS** for ordinary wear, town or country, 2s. 9d. to 4s. yard, 28 inches. (For youths' wear many of these are excellent, being hard twisted and closely woven.)

"SAXONY" and WORSTED TWEEDS for professional or business wear, made from, or mixed with, fine colonial wools. 56 in., 6s. 9d. to 12s. 6d. yard, according to weight and degree of fineness.

Thin Hand Loom and Power Loom TWEEDS make capital suits for warm climates or for home summer wear, being light, woolly, and cool. Single width from 2s. 3d., and double width 4s. 6d. yard. Some of these are also admirably suited for Ladies' Gowns, Cloaks, and Ulsters, others for Cycling, and still others for small boys' suits.

DONEGAL HOMESPUNS, hand-spun and hand-woven by the peasantry, 2s. to 3s. 6d. yard, according to weight and merit, 27 to 30 inches wide. The thin ones are perfect for tropical climates, the medium and heavy for summer and winter lounge wear.

Cork, Kerry, Tipperary, Connemara, and Mayo peasant-made Homespuns, 2s. 8d. yd. upwards. A great variety of the famous **HARRIS, LEWIS, SHETLAND, and ST. KILDA HOMESPUNS**.

NATURAL WHITE, BROWN, and GREY HOMESPUNS, light, medium, and heavy.

IRISH HOMESPUN TWEEDS for a serviceable suit, and boys' wear, 28 in., 2s. 6d. to 3s. yd. Special **TWEEDS** for Mourning and Clerical wear, 2s. 6d. to 3s. 6d. yard, 28 in. wide.

NAVY SERGES of superior manufacture and hard wear, comprising the recognised yachting qualities, those for ordinary wear, and the rough, strong Royal Navy and Police **SERGES**; price according to quality and weight. Also Black and Grey **SERGES**.

OVERCOATINGS, BLACK and GREY COATINGS, WHIP-CORDS or RIDING TWEEDS and TROUSERINGS, all of sterling value, and fixed, closest prices.

SUPERFINE FLANNELS & TWEEDS, also **CASHMERES**; for thinnest **TROPICAL SUITS SHIRTINGS, TRAVELLING RUGS, 10/- to 35/- PUTTEES, CAPS, &c.**

HAND-KNITTED HOSIERY, made by the Irish peasantry. Socks, 1s., 1s. 3d., 1s. 6d., and 2s. pair. Stockings, plain ribbed, 2s. 9d. to 3s. 9d. pair; Fancy, 3s. 6d. to 5s. 6d. pair. Gloves, 1s. to 2s. pair.

FLANNEL TWEEDS for thin tropical suits, made of selected home wools, including natural browns and useful mixtures; well spun and woven on hand-looms. They wear extremely well and don't shrink. Anglo-Indians, Cape residents, travellers, and explorers in hot climates are urged to give this speciality of mine a trial. 1s. 9d. to 3s. yard.

Patterns of any of above by request. Applicants must be explicit in stating their wants as to quality and purpose, also fancy as regards pattern, and whether for Town or Country wear. A promise should also be given that they will be returned carefully within a week, anywhere in the United Kingdom (those living in London are expected to call and view the stock for themselves);—abroad, by next mail after a week's time for examination.

With few exceptions I allow a discount of 10% off above prices for orders aggregating over 100 yards at a time—71% ditto over 50 yards; and 5% over 25 yards—an inducement to circulate the patterns amongst friends, especially when sent to distant countries; the higher discounts are great concessions.

Parties abroad, not caring to wait for Patterns to be sent to order from, may depend upon my exercising diligence and fidelity in selecting for them, if they give a clear indication of their wants and enclose a remittance (as I know by experience the kind of cloths best suited to every climate and country). Any surplus will be at their disposal.

Arrangements have been made with tailoring firms of repute to make up these cloths if desired by Customers abroad. Although we do not make the extravagant promises of some advertisers, we shall endeavour to maintain our reputation in this department also. To share in this arrangement, send usual measurements, or old suit.

All cloths average 28 inches wide, except when stated to be double width; 7 yards single width or 3½ yards double is the quantity for an ordinary size man's suit; 5 yards to 7 yards for Overcoat, according to size. The weight of a suit length varies from 3 lbs. for a light Homespun or Tweed to 8 lbs. for a thick Frieze. When parcels are to be forwarded by post the cost must be added to remittance; if by rail or sea, charges will be booked forward.

A British Institution

There are many British Institutions—such as the Tower, November Fog, the Houses of Parliament, the “Zoo,” and so on. Certain institutions could be specified that we could perhaps do without; but there is one British institution, celebrated in three centuries (the 18th, 19th, and 20th) which people cling to more persistently every year,

Pears' Soap

The reason for this popularity is not far to seek. **PEARS'** is the purest, best, and most healthful of all skin-cleansing and skin-beautifying agents known to man—or woman. Eminent analysts and skin-specialists unite in testifying that it is superior to all other toilet soaps.

PREFACE TO THE XLTH ANNUAL VOLUME.

(1908.)

RECONSTRUCTION and re-arrangement of the various sections have enabled the Editor to add two pages to the Index, thereby increasing the number of references to close on five thousand; and the various Orders of Knighthood have now been merged into two alphabetical lists of Knights and Companions, in place of the five sets of lists which appeared in former editions.

An ingenious suggestion with regard to the Banking information, made during the past year, has been adopted, and every branch of every bank in the United Kingdom is included, with a gain of the two pages appropriated to the Index. The "Remarkable Occurrences" appear under a systematic classification which transforms what was, perhaps, a somewhat dreary chronicle into a handy Dictionary of Dates for the period under review; and additions have been made to the monetary tables and to the general statistics throughout the book.

Among the new articles will be found a *précis* of the amended Patent Law, a digest of the Employers' Liability Act, an estimate of the strength and cost of the Armies of the world, an examination of Mr. Haldane's "New Model," a consideration of the rival questions of Conscription and Universal Service, a forecast of the workings of the new Death Duties, a statement of the Cost of Old Age Pensions, and an enquiry into the state of the British Drama of the day.

The Editor is the recipient of many letters appreciative of the volume annually produced, and replete with suggestions for further improvement. He begs leave to say that he is deeply sensible of the obligation under which he is placed, and it will be his constant endeavour to retain the goodwill of his subscribers in every quarter of the globe. He trusts, however, that he may be allowed to request that all communications may be posted so as to reach the office *not later than the last day of October*.

“Earned” Incomes.

ORDINARY INVESTMENTS are frequently beyond the reach of the man with an “Earned” Income. To such, their general unsuitability is moreover obvious—the risk of depreciation in value, or even total loss of Capital, being ever present.

NO METHOD of utilizing comparatively small Annual Savings adapts itself to the practical needs of the Provident Classes so satisfactorily as that afforded by the system of Life Assurance.

PRUDENT PERSONS desirous of having full and instructive information should write for the New Prospectus of the “SCOTTISH WIDOWS’ FUND.” This great *Mutual* Society was established in 1815, and has accumulated a Fund of

£19,000,000.

WEST END OFFICE: 5, WATERLOO PLACE, S.W.

THE NEXT DIVISION OF PROFITS

in this Society will be made as at 31st December of the current year (1908), and the present is an advantageous time for effecting Assurances to share therein.

A SPECIAL SUPPLEMENT, pages 385-958, contains a preliminary guide to the Principal Holiday and Health Resorts of the United Kingdom.

AN EDUCATIONAL SUPPLEMENT, pages 829-883, contains a List of Schools, with, wherever obtainable, particulars of climate by Medical Officer of Health.

DURATION OF LIGHT AND DARKNESS.

THE second column of the first page of Calendar for every month contains a small diagram showing the amount of Darkness, or of Sun or Moonlight. These small figures represent the twelve hours from 6 P.M. to 6 A.M., and have four divisions, each representing three hours. From the 1st to the 5th of January there is no moonlight from 6 P.M. till 6 A.M., but from the 14th to the 20th it will be seen that there is moonlight. In the summer months the Sun comes to our aid.

THE DIAGRAMS USED ARE—

 Six to 9 6 to 12 6 to 3 6 to 6 Nine to 12 9 to 3 9 to 6 Twelve to 3 12 to 6 Three to 6

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

January 1. Day breaks at 6h. 2m. morn., and Twilight ends at 6h. 4m. aft., the length of the Day being 7h. 50m.

Jan. 3. Earth at least distance from the Sun, 0h. morn.

Jan. 3. A Total Eclipse of the Sun, invisible at Greenwich. See p. 73.

Jan. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 10⁷s.

Jan. 5. Venus in conjunction with the Moon, 8h. 20m. aft. ♀ 0° 45' N.

Jan. 8. Mars in conjunction with the Moon, 10h. 7m. aft. ♂ 5° 8' N.

Jan. 17. Vesta in conjunction with the Moon, 3h. morn. Vesta 0° 52' N.

Jan. 17. Occultation of δ Geminorum and δ Geminorum; magnitudes 5² and 3⁶ respectively. The disappearances take place at 4h. 58m. morn., 94° from the vertex, and 4h. 19m. aft., 48° from the vertex, respectively; the reappearances at 5h. 42m. morn., 108° from the vertex, and 4h. 34m. aft., 18° from the vertex, respectively.

Jan. 18. Occultation of B.A.C. 2788; magnitude 5⁹. The disappearance takes place at 8h. 26m. aft., 110° from the vertex; the reappearance at 9h. 33m. aft., 335° from the vertex.

Jan. 19. Jupiter in conjunction with the Moon, 2h. 57m. aft. ♀ 1° 33' S.

Jan. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 9⁵s.

Jan. 21. Occultation of 37 Leonis; magnitude 5⁹. The disappearance takes place at 8h. 9m. morn., 98° from the vertex; the reappearance at 8h. 59m. morn., 225° from the vertex.

Jan. 29. Jupiter in opposition to the Sun, 9h. aft.

Jan. 29. Occultation of B.A.C. 5580; magnitude 5⁷. The reappearance only is visible at Greenwich; it takes place at 4h. 17m. morn., 329° from the vertex.

In this month the Mornings increase 25m., and the Afternoons 45m.

MORNING AND EVENING STARS.

☿ MERCURY is a morning star in the first few days of the month, rising S. E.; an evening star towards the end of the month, setting S. W. by W.

♀ VENUS is an evening star throughout the month, setting S. W. by W. in the first half of the month, and towards the end W. by S.

♂ MARS sets in the evening at 10h. 45m., nearly due W.

♃ JUPITER rises in the evening N. E. by E.

♄ SATURN is an evening star, setting W. by S.

In the early part of the month the constellations Camelopardus, Lynx, Gemini, Monoceros, and Canis Major are on the meridian about midnight. In Gemini there is a fine compressed cluster of small stars, crowded together, and hardly distinguishable from a nebula, nearly midway between γ and ζ Geminorum. It can be best observed on the nights immediately before and

after the 3rd. There is a very fine cluster in Canis Major, in R. A. 6h. 43m. and Decl. 20° 39' S., 4° South of Sirius. With a very small astronomical telescope the individual stars can be easily distinguished; and with a low-power eye-piece, on the larger instruments, the field appears full of stars of various magnitudes. Neptune and Vesta can be well observed in this month. See p. 77.

* The days thus indicated throughout the Almanack are those on which High Tides may be expected. Strong northerly winds in the North Sea and a low barometer with heavy rains in the counties drained by the Thames will probably cause a higher rise of the river, and the low-lying riverside districts to be flooded.

APPARENT RIGHT ASCENSION AND DECLINATION of the POLE STAR.

In the early part of this month the constellations Ursa Major, Lynx, Cancer, and a part of Hydra are on the meridian about midnight. In Cancer there is a very beautiful cluster of stars, preceding a Cancri about 8m. in R.A. and nearly same declination, consisting of some 200 stars from the 8th to 13th magnitudes. The fine group of stars in Cancer, called "Praesepe," can be best observed in this month on the nights immediately preceding and following the 1st. It does not consist of a very great number of stars, but the components are, as compared with those of other clusters, of considerable magnitude. It is situated in R.A. 3h. 34m. and Decl. 20° 20' N., about 1° to the west of a line joining the stars δ and γ Cancri.

The triple star ζ in Cancer may be examined in this month: it will be found in R.A. 8h. 6m. 56s. and Decl. 17° 56' N. Neptune, Pallas, and Vesta can be observed in this month. See p. 77.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA

March 1. Day breaks at 4h. 55m. morn., and Twilight ends at 7h. 31m. aft., the length of the Day being 10h. 50m.

Mar. 2. Mercury in conjunction with the Moon, 6h. 31m. morn. ☿ 8° 7' N.

Mar. 3. Saturn in conjunction with the Moon, 7h. 9m. aft. ♄ 3° 4' N.

Mar. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 49s.

Mar. 5. Venus in conjunction with the Moon, 1h. 29m. aft. ♀ 5° 49' N.

Mar. 6. Mars in conjunction with the Moon, 2h. 52m. aft. ♂ 5° 26' N.

Mar. 8. Occultation of δ Tauri; magnitude 4.2. The disappearance takes place at 10h. 10m. aft., 109' from the vertex; the reappearance at 10h. 32m. aft., 151' from the vertex.

Mar. 11. Neptune in conjunction with the Moon, 7h. 55m. aft. ♆ 0° 50' S.

Mar. 12. Mercury stationary in the heavens, 0h. aft.

Mar. 13. Jupiter in conjunction with the Moon, 4h. 7m. aft. ♃ 1° 7' S.

Mar. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 43s.

Mar. 20. Occultation of 80 Virginis; magnitude 5.8. The disappearance takes place at 2h. 48m. morn., 70' from the vertex; the reappearance at 3h. 47m. morn., 315' from the vertex.

Mar. 21. Sun enters the sign Aries. Spring commences, 0h. 27m. morn.

Mar. 21. Saturn in conjunction with the Sun, 5h. morn.

Mar. 26. Uranus in conjunction with the Moon, 9h. 20m. morn. ♅ 0° 11' N.

Mar. 27. Mercury at greatest elongation (28°) West, 10h. morn.

Mar. 30. Mercury in conjunction with the Moon, 2h. 25m. morn. ☿ 2° 48' N.

Mar. 31. Saturn in conjunction with the Moon, 11h. 4m. morn. ♄ 3° 7' N.

In this month the Mornings increase 1h. 9m., and the Afternoons 51m.

MORNING AND EVENING STARS.

☿ MERCURY is a morning star, rising E. by S. till middle of month, then E.S.E.

♀ VENUS is an evening star, setting W.N.W.; at end of month N.W. by W.

♂ MARS is an evening star, setting W.N.W. Near to Venus at end of month.

♃ JUPITER in the constellation Cancer, near to γ and δ.

♄ SATURN is an evening star till the middle of the month. Too near the Sun for observation till towards the end of April.

At midnight, in the beginning of March, the constellations Ursa Major, Leo, Crater, and Hydra are on the meridian. In Ursa Major is a large planetary Nebula, appearing as a mass of attenuated light, from $3\frac{1}{2}'$ to $4'$ in diameter; it lies $2\frac{1}{2}^\circ$ S.E. of β Ursa Majoris.

Virgo comes to the meridian about midnight towards the end of this month. Between Virgo and Coma Berenices is a large Nebula, one of the

class known as "Spiral Nebulae," situated in R.A. 12^h , 14^m , and Decl. 15° N. With a large telescope of 8 inches aperture it appears to be resolvable in the centre into two bright star-like points. This constellation is thickly strewed with nebulae, which may be best observed on the evenings immediately before and after the 2nd and 31st of the month. Ceres and Pallas can be observed in this month. See p. 77.

☿ MERCURY is a morning star, rising, early in the month, E. by S., then due E. to E. by N.

♀ VENUS is an evening star, setting N.W. by W. at first, and afterwards N.W.

♂ MARS is an evening star, setting N.W. by W., not far from Venus.

♃ JUPITER in the constellation Cancer; near to, and about equidistant from, γ and δ. Souths in the early evening.

♄ SATURN is a morning star after the middle of the month, rising due E., in the southern portion of the constellation Pisces.

At the latter part of April the constellations Draco, Boötes, and Libra will be on the meridian about midnight. An irresolvable double Nebula in Canes Venatici, about 4° S.W. of γ Ursæ Majoris, can be observed in this month. The Southern Nebula is surrounded by a faint ring of nebulous light, and was called by Herschel, in his Catalogue, "the Halo Nebula." Later observations placed it among the "Spiral" Nebulae. That this is not a true incandescent Nebula is shown by the absence of bright lines in its spectrum. In R.A.

15h. 14m., Decl. 2° 28' N., is a very fine cluster of stars, condensed into great brilliancy towards the centre. Sir W. Herschel was able to distinguish over 200 stars in this group in the field of his 40-ft. reflector, but found the middle portion so condensed that the individual stars could not be separated. The stars range from the 12th to 15th mag. The evenings about the 1st and 30th are the best for observing these objects. Ceres can be well observed in this month. See page 77.

Mean Longitude of Moon's Ascending Node, May 1, 98° 2' 20".

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

May 1. Day breaks at *2h. 3m. morn.*, and Twilight ends at *9h. 51m. aft.*, the length of the Day being *14h. 46m.*

May 4. Occultation of μ Geminorum; magnitude *3²*. The disappearance takes place at *8h. 48m. aft.*, *52°* from the vertex; the reappearance at *9h. 46m. aft.*, *232°* from the vertex.

May 5. Mean time of Sun's semidiameter passing the meridian, *1m. 6¹s.*

May 6. Occultation of μ^2 Cancri; magnitude *5⁴*. The disappearance takes place at *8h. 33m. aft.*, *57°* from the vertex; the reappearance at *9h. 40m. aft.*, *249°* from the vertex.

May 12. Mercury at least distance from the Sun, *10h. morn.*

May 16. Occultation of ζ^3 Libræ; magnitude *5⁸*. The disappearance takes place at *1h. 19m. morn.*, *156°* from the vertex; the reappearance at *1h. 58m. morn.*, *214°* from the vertex.

May 16. Occultation of ψ Ophiuchi; magnitude *4⁶*. The disappearance takes place at *11h. 15m. aft.*, *151°* from the vertex; the reappearance at *oh. 22m.* on the morning of the *17th*, *269°* from the vertex.

May 19. Occultation of α^4 Sagittarii; magnitude *5⁹*. The disappearance takes place at *3h. 43m. morn.*, *24°* from the vertex; the reappearance at *4h. 23m. morn.*, *310°* from the vertex.

May 19. Uranus in conjunction with the Moon, *8h. 34m. aft.* Uranus *0° 35' N.*

May 20. Mean time of Sun's semidiameter passing the meridian, *1m. 7⁴s.*

May 25. Saturn in conjunction with the Moon, *11h. 47m. morn.* $\frac{1}{2}$ *3° 15' N.*

May 29. Venus at greatest brilliancy, *8h. aft.*

In this month the Mornings increase *43m.*, and the Afternoons *43m.*

MORNING AND EVENING STARS.

☿ MERCURY is too near the Sun for observation early in the month.

♀ VENUS is an evening star, setting N.W. In conjunction with the Moon on the 4th, at 9h. 59m. morn. ♀ 4° 15' N. At greatest brilliancy on the 25th, at 8h. aft.

♂ MARS is an evening star, setting N.W. In conjunction with the Moon on the 3rd, at 11h. 52m. morn. ♂ 2° 40' N.

♃ JUPITER in Cancer, very near to δ Cancri.

♄ SATURN is a morning star, rising nearly due E. In conjunction with the Moon on the 25th, at 11h. 47m. morn. ♄ 3° 15' N.

Towards the end of May we shall find the constellations Draco, Hercules, Ophiuchus, and Scorpio on the meridian about midnight.

Hercules contains a very splendid cluster of stars situated in R.A. 16h. 38m. and Decl. 36° 41' N. This, like most of the star-clusters, is condensed in the centre, and may be easily resolved with moderate telescopic aid; and a few days about the 1st and 29th, when the Moon is

absent, it may, if the opportunity is taken of a very clear night, be seen with the naked eye plainly between the stars γ and η Herculis, rather nearer to η. This cluster, discovered by Halley in 1714, is one of the most beautiful examples of these bodies to be seen in the heavens. With the great Refractor of the Lick Observatory the nebulous glow at the centre has been resolved into separate points.

MORNING AND EVENING STARS.

♿ MERCURY is an evening star, setting N.W., and towards the end of month N.W. by W. In conjunction with Neptune on the 11th, at 4h. 25m. morn. ♄ 1° 37' N.

♀ VENUS is an evening star, setting N.W. by W. Near to Mercury in middle of the month.

♂ MARS is an evening star, setting N.W.

♃ JUPITER is an evening star, setting N.W. by W. In the constellation Cancer.

♄ SATURN is a morning star, rising nearly due E.

In the last week of June the constellations Draco, Lyra, a portion of Hercules, Scutum Sobieski, and a part of Sagittarius will south about midnight.

In Sagittarius there is a notable and very extensive Nebula, somewhat like a horseshoe in shape. It will be found in R.A. 18h. 15m., and Decl. 16° 15' S. The spectroscope shows this Nebula to consist of a mass of incandescent gas. Professor Holden says that one arm of the Nebula has

changed its position since Herschel's time. In good weather can be well seen with a small telescope.

In Sagittarius, a little West and North of λ, is a globular cluster of very minute stars, densely crowded, to be seen only with difficulty in small telescopes. Owing to its great southern declination there is but little chance of seeing it except when southing. Uranus and Juno may be well observed in this month. See p. 77.

Mean Longitude of Moon's Ascending Node, July 1, 94° 48' E.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

July 1. In this month there is no real night till after the 20th.

July 1. Vesta in conjunction with the Moon, 6h. aft. Vesta 0° 24' N.

July 1. Jupiter in conjunction with the Moon, 6h. 59m. aft. ♀ 2° 40' S.

July 2. Earth at greatest distance from the Sun, 7h. aft.

July 5. Mean time of Sun's semidiameter passing the meridian, 1m. 8' 4s.

July 12. Occultation of 24 Sagittarii; magnitude 5.9. The disappearance takes place at 9h. 48m. aft., 31° from the vertex; the reappearance at 10h. 5m. aft., 2° from the vertex.

July 15. Mercury and Venus in conjunction, 2h. 2m. aft. ♀ 1° 12' N.

July 15. Mercury stationary in the heavens, 10h. aft.

July 16. Occultation of 7 Aquarii; magnitude 4.3. The disappearance occurs at 10h. 59m. aft., 110° from the vertex; the reappearance at 0h. 3m. on the morning of the 17th, 271° from the vertex.

July 19. Saturn in conjunction with the Moon, 4h. 12m. morn. ♀ 3° 2' N.

July 20. Mean time of Sun's semidiameter passing the meridian, 1m. 7' 4s.

July 25. Venus in conjunction with the Moon, 7h. 58m. aft. ♀ 6° 10' S.

July 25. Mercury at greatest elongation (20°) West, 10h. aft.

July 26. Mercury in conjunction with the Moon, 11h. 36m. morn. ♀ 2° 44' S.

July 27. Venus stationary in the heavens, 6h. aft.

July 28. Mars in conjunction with the Moon, 11h. 13m. aft. ♂ 2° 7' S.

July 29. Jupiter in conjunction with the Moon, 0h. 42m. aft. ♀ 3° 2' S.

July 30. Vesta in conjunction with the Moon, 3h. morn. Vesta 0° 1' S.

In this month the Mornings decrease 34m., and the Afternoons 30m.

In the middle of July the constellations
gnus, Vulpecula, Aquila, and Sagittarius will
on the meridian about midnight.The Annular Nebula in Lyra, situated between
and γ, is the best example of the Annular Nebu-
; the heavens containing, as far as is at present
own, comparatively few examples of this class.
requires a rather good telescope to see it well :
is in R.A. 18h. 50m. and Decl. 32° 54' N. Itexhibits a spectrum as if composed of an in-
candescent gas. There is also a globular cluster
in Lyra, as nearly as possible midway between γ
Lyrae and δ Cygni. It is in R.A. 19h. 13m.,
Decl. 30° 1' N. The best nights for the observa-
tion of these objects are those just before and
after the 27th.Uranus and Juno may be well observed in this
month. See p. 77.

1	1	26	27 1		88	48	42			♿ MERCURY is a morning star till the middle of the month, rising N.E. by E. Becomes an evening star at the end of the month, setting W. by N. In conjunction with the Moon on the 27th, at 10h. 38m. morn. ♿ 3h. 22m. S.									
10	1	26	36 1		83	43	44			♂ VENUS is a morning star, rising N.E. by E.									
19	1	25	44 0		83	48	46			♂ MARS rises and sets too near the Sun for observation in this month.									
28	1	26	50 8		88	48	48			♃ JUPITER is an evening star in the early days of the month, setting W.N.W. Becomes a morning star at the end of the month. In conjunction with the Sun on the 17th, at 8h. aft.									
										♄ SATURN rises in the late evening, a little N. of E.									

At the beginning of August, Cepheus, Cygnus, Vulpecula, Delphinus, and Capricornus south at midnight.

In Vulpecula, $3\frac{1}{2}^{\circ}$ due north of γ Sagittæ, is the "Dumb-bell" Nebula, generally considered irresolvable, although under the higher powers of Lord Rosse's telescope there seemed some trace of resolvability shown. It is situated in R.A. 19h. 55m. and Decl. $22^{\circ} 26'$ N., and gives a spectrum of bright lines.

There is a little bright globular cluster, 4° due south of ϵ Delphini, consisting of a mass of very small stars, not easy for small telescopes; ϵ Delphini is situated in R.A. 20h. 28m. 49s. and Decl. $10^{\circ} 59'$ N.—a tiny star, 9th mag. precedes it. This though a small is yet a bright cluster, and may be observed easily on the evenings immediately before and after the 26th of this month.

Configurations of Jupiter's Satellites at 4h. 30m. A.M.

Jupiter too near to the Sun for observation of the satellites till the 18th.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

September 1. Day breaks at 3h. 7m. morn., and Twilight ends at 8h. 53m. aft., the length of the Day being 13h. 32m.

Sept. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 4' 08.

Sept. 9. Occultation of γ^2 Aquarii; magnitude 4.3. The disappearance occurs at 7h. 56m. aft., 123' from the vertex; the reappearance at 8h. 56m. aft., 248' from the vertex.

Sept. 11. Occultation of 30 Piscium; magnitude 4.7. The disappearance takes place at 4h. 9m. morn., 68' from the vertex; the reappearance at 4h. 56m. morn., 170' from the vertex.

Sept. 11. Saturn in conjunction with the Moon, 7h. 45m. aft. $2^{\circ} 33' N$.

Sept. 14. Venus at greatest elongation (46') West, 9h. aft.

Sept. 16. Occultation of ϵ Tauri; magnitude 3.7. The disappearance occurs at 1h. 37m. morn., 79' from the vertex; the reappearance at 2h. 40m. morn., 305' from the vertex.

Sept. 17. Occultation of α Tauri; magnitude 4.8. The disappearance takes place at 4h. 12m. morn., 89' from the vertex; the reappearance at 5h. 29m. morn., 273' from the vertex.

Sept. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 3' 88.

Sept. 21. Venus in conjunction with the Moon, 7h. 15m. morn. $0^{\circ} 5' S$.

Sept. 23. Sun enters sign Libra. Autumn commences, 10h. 59m. morn.

Sept. 24. Vesta in conjunction with the Moon, 10h. aft. Vesta $0^{\circ} 21' S$.

Sept. 27. Mercury in conjunction with the Moon, 1h. 42m. aft. $0^{\circ} 7' 3' S$.

Sept. 28. Ceres in conjunction with the Moon, 6h. aft. Ceres $0^{\circ} 12' N$.

Sept. 29. Occultation of γ^4 Libræ; magnitude 5.4. The disappearance takes place at 7h. 1m. aft., 22' from the vertex.

In this month the Morning decrease 46m., and the Afternoon 1h. 6m.

MORNING and EVENING STARS.

♂ MERCURY is an evening star, setting nearly due W. early in the month, and in the latter half W. by N.

♀ VENUS is a morning star, rising E.N.E., about four hours before the Sun.

♂ MARS is a morning star, rising E. by N. In conjunction with the Moon on the 24th, at 11h. 21m. morn. ♂ 4° 9' S.

♂ JUPITER is a morning star, rising E.N.E.

♂ SATURN rises nearly due E., between the constellations Pisces and Cetus. In opposition to the Sun on the 30th, at 7h. morn.

On the 1st of September, Cepheus, Pegasus, Aquarius, and Piscis Australis will be on the meridian at midnight.

In Pegasus is a fine globular cluster of very small stars, $3\frac{1}{2}'$ in diameter, $4\frac{1}{2}'$ north-west of Pegasus, much condensed towards the centre, where the stars cannot be resolved; there are many telescopic and several rather bright stars in the field. Aquarius contains a fine cluster of

stars, condensed in the centre, and presenting a true globular form, consisting of very small stars very much compressed. It is situated in R.A. 21h. 28m. and Decl. $1^{\circ} 20' S.$

In the early evening at the beginning of the month, the bright cluster in Capricornus, situated in R.A. 21h. 35m. and Decl. $23^{\circ} 40' S.$, can be observed. The best evenings for observation are those immediately before and after the 25th.

Mean Longitude of Moon's Ascending Node, October 1, 89° 56' II.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

October 1. Day breaks at 4h. 8m. morn., and Twilight ends at 7h. 32m. aft., the length of the Day being 11h. 36m.

Oct. 3. Occultation of χ^1 Sagittarii; magnitude 5.1. The disappearance occurs at 9h. 21m. aft., 62° from the vertex.

Oct. 4. Mercury at greatest elongation (26°) East, 11h. aft.

Oct. 5. Mean time of Sun's semi-diameter passing the meridian, 1m. 43s.

Oct. 9. Saturn in conjunction with the Moon, 3h. 7m. morn. 12° 31' N.

Oct. 11. Occultation of B.D. + 12° 436; magnitude 5.9. The disappearance occurs at 10h. 46m. aft., 106° from the vertex; the reappearance at 11h. 53m. aft., 255° from the vertex.

Oct. 14. Venus and Jupiter in conjunction, 3h. 58m. morn. 9° 36' S.

Oct. 15. Occultation of γ Gemini-norum; magnitude 4.3. The disappearance occurs at 5h. 13m. morn., 39° from the vertex; the reappearance at 6h. 21m. morn., 267° from the vertex.

Oct. 20. Mean time of Sun's semi-diameter passing the meridian 1m. 54s.

Oct. 21. Venus in conjunction with the Moon, 7h. 44m. morn. 9° 26' S.

Oct. 23. Mars in conjunction with the Moon, 6h. 49m. morn. 8° 24' S.

Oct. 25. Mercury in conjunction with the Moon, 4h. 38m. aft. 9° 56' S.

Oct. 29. Occultation of η Sagittarii; magnitude 5.7. The disappearance takes place at 6h. 19m. aft., 12° from the vertex; the reappearance at 7h. 0m. aft., 293° from the vertex.

Oct. 30. Occultation of B.A.C. 6490; magnitude 5.7. The disappearance occurs at 5h. 28m. aft., 35° from the vertex; the reappearance at 6h. 26m. aft., 287° from the vertex.

Oct. 30. Uranus in conjunction with the Moon, 6h. 22m. aft. Uranus 1° 3' N.

In this month the Mornings decrease 5m., and the Afternoons 1h. 4m.

MORNING AND EVENING STARS.
♿ MERCURY is an evening star in the earlier portion of the month, setting W.S.W. Too near the Sun for observation in the later portion. In inferior conjunction with the Sun on the 28th, at 4h. aft.
♀ VENUS is a morning star, rising E.N.E.
♂ MARS is a morning star, rising nearly due E.
♃ JUPITER is a morning star, rising E. by N.
♄ SATURN between the constellations Pisces and Cetus, nearly in the same position as last month.

On the 1st of October, Cassiopeia, Andromeda, Pisces, and Cetus are on the meridian at midnight; while Cancer and Orion are rising, and Hercules and Capricornus setting.
In Andromeda, near to the 4th mag. star ν , is a large and irresolvable Nebula in the form of an elongated ellipse. It is situated in R.A. $oh. 37m.$ and Decl. $40^{\circ} 43' N.$ In Sept., 1885, a decided stellar nucleus was observed in R.A. $oh. 36m. 31s.$ Decl. $40^{\circ} 38' N.$, probably unconnected with the Nebula. Very many minute stars can be seen within the Nebula.

A fine double cluster of stars, situated midway on a line joining α Persei and γ Cassiopeia, may be observed in this month. The northern cluster is a magnificent collection of stars, $30'$ in diameter, ranging in magnitude from the 6th to 14th. The smaller southern cluster, $15'$ in diameter, is less rich in stars, and much condensed toward the centre. On fine nights, without moonlight, such as those about the 24th, these objects afford one of the most beautiful subjects for observation.

Mean Longitude of Moon's Ascending Node, November 1, 86° 18' 11.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.
 November 1. Day breaks at 5h. 11m. morn., and Twilight ends at 6h. 27m. aft., the length of the Day being 9h. 38m.

Nov. 1. Occultation of χ Capricorn; magnitude 5.3. The disappearance takes place at 8h. 19m. aft. 77° from the vertex; the reappearance at 9h. 20m. aft., 196° from the vertex.

Nov. 4. Occultation of 30 Piscium; magnitude 4.7. The disappearance takes place at 11h. 16m. aft., 33° from the vertex; the reappearance at 0h. 21m. morn., on the 5th, 213 from the vertex.

Nov. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 7.18.

Nov. 5. Occultation of 33 Piscium; magnitude 4.6. The disappearance takes place at 1h. 4m. morn., 57° from the vertex; the reappearance at 1h. 56m. morn., 177° from the vertex.

Nov. 9. Occultation of ϵ Tauri; magnitude 3.7. The disappearance takes place at 8h. 16m. aft., 133° from the vertex; the reappearance at 9h. 14m. aft., 266° from the vertex.

Nov. 10. Occultation of α Tauri; magnitude 4.8. The disappearance takes place at 9h. 45m. aft., 163° from the vertex; the reappearance at 10h. 29m. aft., 248° from the vertex.

Nov. 13. Mercury at greatest elongation (10°) West, 7h. aft.

Nov. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 8.98.

Nov. 24. Ceres in conjunction with the Moon, 3h. morn. Ceres 0° 14' N.

Nov. 26. Occultation of B.A.C. 6369; magnitude 5.7. The disappearance takes place at 4h. 38m. aft., 40° from the vertex; the reappearance at 5h. 41m. aft., 261° from the vertex.

Nov. 30. Occultation of τ^1 Aquarii, magnitude 5.6; τ^2 Aquarii, magnitude 4.3. The disappearances take place at 7h. 43m. aft. and 8h. 46m. aft., 105° and 47° from the vertex, respectively; the reappearances at 8h. 18m. aft. and 9h. 50m. aft., 161° and 201° from the vertex, respectively.

Nov. 30. Venus and Mars in conjunction, 11h. 15m. aft. ϕ 1° 17' N.

In this month the Mornings decrease 49m., and the Afternoons 39m.

☿ MERCURY is a morning star, rising E.S.E. At least distance from the Sun on the 4th, at *gh. morn.*

♀ VENUS is a morning star, rising nearly due E., and later in the month E. by S. At least distance from the Sun on the 12th, at *11h. morn.*

♂ MARS is a morning star, rising E. by S.

♃ JUPITER in the constellation Cancer, a little North of the stars ζ and ε. In conjunction with the Moon on the 17th, at *gh. 42m. morn.*

♄ SATURN very nearly in the same position as last month, between the constellations Pisces and Cetus.

On the 1st of November, Perseus, Aries, and Cetus are on the meridian at midnight.

An irresolvable Nebula $2\frac{1}{2}^{\circ}$ to the East of γ Andromeda may be observed in this month. It was discovered by Miss Herschel, with a small reflecting telescope of twenty-seven inches in

focal length. It is a very elongated Nebula, $15'$ long by $3'$ broad, with a cleft, dark in the middle, and suggests the idea of a vast flat ring seen very obliquely. It is in R.A. $2^h. 16^m.$ and Decl. $41^{\circ} 49' N.$ The best evenings for observing it are those immediately before and after the 23rd.

Mean Longitude of Moon's Ascending Node, December 1, 86° 46' II.

ECLIPSES, OCCULTATIONS, AND OTHER CELESTIAL PHENOMENA.

December 1. Day breaks at 5h. 41m. *morn.*, and Twilight ends at 5h. 57m. *aft.*, the length of the Day being 8h. 8m.

Dec. 5. Mean time of Sun's semidiameter passing the meridian, 1m. 10' 48".

Dec. 5. Occultation of B.D. 12° 436; magnitude 5.9. The disappearance takes place at 5h. 21m. *aft.*, 97° from the vertex; the reappearance at 6h. 21m. *aft.*, 237° from the vertex.

Dec. 7. A Penumbral Eclipse of the Moon, visible at Greenwich. See p. 73.

Dec. 7. Occultation of 105 Tauri; magnitude 5.8. The disappearance takes place at 11h. 32m. *aft.*, 59° from the vertex; the reappearance at oh. 43m. *morn.*, on the 8th, 266° from the vertex.

Dec. 8. Occultation of η Tauri; magnitude 5.2. The disappearance takes place at 5h. 36m. *morn.*, 7° from the vertex; the reappearance at 6h. 21m. *morn.*, 264° from the vertex.

Dec. 8. Occultation of γ Gemini-norum; magnitude 4.3. The disappearance takes place at 10h. 58m. *aft.*, 124° from the vertex; the reappearance at oh. 13m. *morn.*, on the 9th, at 258° from the vertex.

Dec. 14. Occultation of δ Leonis; magnitude 5.7. The disappearance takes place at 2h. 37m. *morn.*, 110° from the vertex; the reappearance at 3h. 44m. *morn.*, 347° from the vertex.

Dec. 18. Occultation of 80 Virginis; magnitude 5.8. The disappearance takes place at 5h. 50m. *morn.*, 108° from the vertex; the reappearance at 6h. 53m. *morn.*, 348° from the vertex.

Dec. 20. Mean time of Sun's semidiameter passing the meridian, 1m. 11' 08".

Dec. 22. Sun enters sign Capricornus. Winter commences, 5h. 35m. *morn.*

Dec. 22. Ceres in conjunction with the Moon, 9h. *morn.* Ceres 0° 27' N.

Dec. 23. Annular Eclipse of the Sun, visible at Greenwich. See p. 73.

Dec. 29. Saturn in conjunction with the Moon, 8h. 14m. *aft.* δ 3° 4' N.

In this month the Mornings decrease 23m., and the Afternoons increase 5m.

MORNING AND EVENING STARS.

☿ MERCURY is a morning star in the first half, rising S.E. by E.; an evening star towards the end of the month, setting S.W.

♀ VENUS is a morning star, rising E.S.E.

♂ MARS is a morning star, rising E.S.E.

♃ JUPITER in the constellation Leo. Sets about midnight W. by N.

♄ SATURN in the northern portion of the constellation Cetus. Souths in the early evening. In conjunction with the Moon on the 2nd, at *zh. 11m. aft.* $h^2 2^{\circ} 56' N.$

On the 1st of December, at midnight, the constellations Camelopardus, Taurus, and Eridanus will be on the meridian.

In Taurus is a fine Nebula of a pearly white colour $1\frac{1}{2}^{\circ}$ North-west of ζ Tauri. Lord Rosse compared its appearance to that of a crab, and it is generally known as the "Crab Nebula."

About the middle of December Orion souths at midnight, and can be best observed in this month.

This magnificent constellation contains the grandest of all the Nebulae, situate in the Sword-Scabbard. A line drawn from α Orionis through ζ , the third star of the belt, will pass over θ Orionis and the Nebula. It can be seen with the naked eye on any clear night. Evenings before and after the 22nd of the month are the best for observing it.

Previous to 1752 the above dates are computed from the Old Style. Those printed in heavier type are leap-years. 1752 had E D up to September 2, but A from September 14 to December 31, the intermediate days being dropped for the change of Style. Its Easter was the last in Old Style. Until then also the years were considered to begin on March 25; but that, as it did

not affect the date of Easter, is not noticed in this Table. The Table of Moveable Feasts in the Prayer-Book gives all the others after finding Easter in this. The Sunday Letters in the Calendar then enable any one to count the days of the week from Sunday. The tables in modern Prayer-Books are calculated for the New Style only. * Old Style. † New Style.

The French Republican Calendar.

THIS, although reckoned from the 22nd September, 1792, was not introduced until the 22nd November, 1793. It remained in use only till the 31st December, 1805. The Gregorian Calendar was restored January 1st, 1806 (Nivôse 10, Year XIV.). The months varied in different years, thus Nivôse 1 commenced December 21st in 1793, December 22nd in 1795, December 21st in 1796, December 22nd in 1799, December 23rd in 1803, and December 22nd in 1804 and 1805. The following are the dates for the year 1804, the last complete year of the Calendar:—

Vendémiaire (<i>Vintage</i>), 23 Sept. to Oct. 22	Germinal (<i>Budding</i>), 22 Mar. to Apr. 21
Brumaire (<i>Foggy</i>), 23 Oct. to Nov. 22	Floréal (<i>Flowery</i>), 21 April to May 20
Frimaire (<i>Sleety</i>), 22 Nov. to Dec. 21	Prairial (<i>Pasture</i>), 21 May to June 20
Nivôse (<i>Snowy</i>), 22 Dec. to Jan. 21	Messidor (<i>Harvest</i>), 20 June to July 19
Pluviôse (<i>Rainy</i>), 21 Jan. to Feb. 20	Thermidor (<i>Hot</i>), 20 July to Aug. 19
Ventôse (<i>Windy</i>), 20 Feb. to Mar. 21	Fructidor (<i>Fruit</i>), 19 Aug. to Sept. 18

The months were divided into three decades of ten days each, but to make up the 365, five were added at the end of September: (*Primidi*), dedicated to Virtue; (*Duodi*) to Genius; (*Tridi*) to Labour; (*Quartidi*) to Opinion; and the 5th (*Quintidi*) to Rewards. To Leap Year, called *Olympic*, a sixth day, the 22nd or 23rd September (*Sextidi*), "Jour de la Révolution," was added. This variation of dates has led to considerable confusion, but those who may wish to trace the fourteen years will find some very elaborate tables in the English edition of Bourrienne's "Life of Napoleon": Bentley.

Standard Time.

It is well known that the "time of day" differs everywhere except in places on the same meridian, the difference in local times being caused by the rotation of the Earth on its axis from West to East in each twenty-four hours; and as the globe is divided astronomically into 360° of longitude, reckoned by us from the meridian of Greenwich, 180° to the East and 180° to the West, it is easily seen that each 15° is equal to one hour of time.

The notice, "London (Greenwich) time observed at all stations," formerly so familiar to the travellers by railway, was really the introduction to the use of *Standard Time*, and was inevitable when railway time-tables were printed; but in a country so large as the Dominion of Canada, which extends over 80° of longitude, as also in the United States with nearly 60°, it soon became absolutely necessary to minimise the great inconvenience, and so the use of *Standard Time* was made legal.

By *Standard Time* is meant that the hour of each 15° of longitude becomes the local mean time for the zone or belt extending 7½° on each side of the central meridian; though in practice the zone has to be adapted to local circumstances, and so cannot conform to the exact line or meridian, but is arranged to suit boundaries of States or Provinces as may be most convenient. By way of illustration, it may be noted that in the Province of Ontario, Canada, by Act of the Legislature, the hour of 75° W. is *Standard Time* for the Province as far as 87° W., and that the S.W. point, 83° W., extends westerly beyond the eastern part of the State of Michigan, where the time of 90° W. is used; so at Windsor, Ontario, it is noon while in Michigan—more to the east—it is 11 A.M. The *Standard Time* as used in

the chief cities of Canada and the United States may be noted: at Quebec, Montreal and Toronto, at Boston, New York and Washington, the time of 75° W., five hours earlier than Greenwich, is used; at Winnipeg in Manitoba, and at Detroit, Chicago and New Orleans, the time of 90°, six hours earlier than Greenwich, is used; at Regina and Denver it is the time of 105°, seven hours earlier than Greenwich; and in British Columbia and at San Francisco the time of 120° W., eight hours earlier than Greenwich, is used; and when 180° is reached another day begins in Eastern Siberia, at the Fiji Islands, and a little to the east of New Zealand.

The same rule applies to places east of Greenwich, where, of course, noon is earlier than at Greenwich according to the longitude. Spain adopted *Standard*—that is, Greenwich—Time early in the century. When noon at Greenwich it is 2 P.M. in Egypt and South Africa; it is 6 P.M. at Calcutta, 90° E.; in Japan, 135° E., it is 9 P.M.; and in Eastern Australia, 150° E., it is 10 P.M.

The question has been asked very often, "Where does a day begin?"—that is, any special day, New Year's Day or Easter Day—and the answer is that for all peoples, nations, and languages, using maps with longitude East and West from Greenwich, each day begins at the meridian of 180°, slightly east of New Zealand in the South, and intersecting Eastern Siberia in the North, and so the last day of the nineteenth century and the first day of the twentieth were on the Earth together, not running concurrently or side by side, north and south of the Equator, as has been supposed, erroneously, but the latter following the former from 180° westerly to Greenwich, and on again to 180°, where it gave place to January 2nd. See p. 76.

Julian Calendar.

IN the Roman (Julian) Calendar the months corresponded exactly with our own, excepting that down to the time of the great Emperor Augustus, the fifth and sixth months of the year—which, with the Romans, began with March—were called Quintilis and Sextilis; afterwards they were named in honour of the emperors Julius and Augustus.

In reckoning the days of each month three fixed points were taken, and any particular day was said to be so many days before the next coming fixed day. These three points were (1) the Kalends, by which name the first of each month was known; (2) the Nones, which fell on the seventh day of the month in March, May, July, and October, and on the fifth day in each of the other months; and the Ides, which always fell eight days after the Nones.

For example, the 1st of January was the Kalends of January (*Kalendis Januariis*), the 31st of December was the day before the Kalends of January (*pridie Kalendas Januariis*); but Dec. 30th was the third day before the Kalends of January (*ante diem tertium Kalendas Januariis*), in this case both Jan. 1st and Dec. 31st being included in the reckoning. And so on back to Dec. 14th, which was the nineteenth day before the January Kalends (*ante diem undevicesimum Kal. Jan.*), Dec. 13th being *Idibus Decembris*, the Ides of December. In Leap-year, both Feb. 24th and Feb. 25th were known as the sixth day before the March Kalends, being distinguished respectively as *prior* and *posterior*.

In the year 1908 there will be four Eclipses, three of the Sun and one of the Moon; one of the Sun being partly visible at Greenwich, and a penumbral Eclipse of the Moon, visible at Greenwich.

I. A Total Eclipse of the Sun, January 3, invisible at Greenwich. Begins on the Earth generally at 7h. 7m. aft., in longitude 167° East of Greenwich, and latitude 7° North. Central Eclipse begins generally at 8h. 4m. aft., in longitude 155° East of Greenwich, and latitude 11° North. Central Eclipse ends generally at 11h. 27m. aft., in longitude 85° West of Greenwich, and latitude 10° North. Eclipse ends on the Earth generally at 0h. 23m. morn., on January 4, in longitude 97° West of Greenwich, and latitude 6° North.

The line of Central Eclipse lies in the North and South Pacific Ocean.

II. An Annular Eclipse of the Sun, June 28, visible at Greenwich as a Partial Eclipse. Begins on the Earth generally at 1h. 29m. aft., in longitude 112° West of Greenwich, and latitude 2° North. Central Eclipse begins generally at 2h. 35m. aft., in longitude 130° West of Greenwich, and latitude 5° North, and ends generally at 6h. 25m. aft., in longitude 1° West of Greenwich, and latitude 10° North. The Eclipse ends on the Earth generally at 7h. 30m. aft., in longitude 19° West of Greenwich, and latitude 7° North.

Partial Eclipse at Greenwich—

The first contact occurs at 163° from the vertex, towards the East; the last contact at 122° from the same point, and in the same direction. The magnitude of the Eclipse will be represented by 0.66, taking the diameter of the Sun = 1. At Cambridge, Liverpool, and Oxford the Partial Eclipse will also be visible under conditions varying but very little from those at Greenwich.

III. A Penumbral Eclipse of the Moon, December 7-8, visible at Greenwich.

First contact with the Penumbra 7d. 7h. 38m. aft.
Middle of the Eclipse 7d. 9h. 55m. aft.
Last contact with the Penumbra 8d. 0h. 12m. morn.

The first contact occurs at 39° from the North point of the Moon's limb towards the East, and the last contact at 208° from the same point and in the same direction.

IV. An Annular Eclipse of the Sun, December 23, invisible at Greenwich. Begins on the Earth generally at 9h. 7m. morn., in longitude 52° West of Greenwich, and latitude 13° South. Central

Eclipse begins generally at 10h. 12m. morn., in longitude 74° West of Greenwich, and latitude 23° South. Central Eclipse ends generally at 1h. 18m. aft., in longitude 86° East of Greenwich, and latitude 32° South. Eclipse ends on the Earth generally at 2h. 22m. aft., in longitude 64° East of Greenwich, and latitude 22° South.

Visible as a Partial Eclipse in South Africa and the Mauritius.

V. ECLIPSES OF JUPITER'S SATELLITES.
The following table contains all the Eclipses of the first Satellite, and those only which are visible at Greenwich of the second, third, and fourth Satellites.

The Roman numerals indicate the Satellite eclipsed; the letters D. and R. signifying respectively Disappearance and Reappearance. Those Eclipses which are visible at Greenwich have an asterisk after the D. or R. in the second column.

At the beginning of the year, and until January 29, the disappearances and reappearances will take place on the Western side of the Planet; and from January 29 to August 17 on the Eastern side; from August 17 to end of the year on the Western side of the Planet. As the astronomical telescope inverts the image, the Western limb of the Planet will appear on the left hand of the image in the field of view, and the Eastern on the right hand.

The mean time for any other place than Greenwich may be found by applying to the times given in the following table the difference of longitude, adding if the longitude of the place is East of Greenwich, and subtracting if West.

MEAN RIGHT ASCENSION AND DECLINATION OF ONE HUNDRED FUNDAMENTAL STARS, VISIBLE AT GREENWICH, FOR JANUARY 1, 1908.

NAME OF STAR.		Mag.	Right Ascension.		Annual Precess.	Declination.		Ann. Prec.	EXPLANATION OF THE ASTRONOMICAL TABLES.
			H. M. S.	S.	"	"	"		
α	Andromedæ	2.1	0	3 37.8	+ 3.08	+28	34 57	+20.0	<i>Mean Right Ascension.</i> The Mean Right Ascension and Declination for any other year may be found from this table by multiplying the annual precession by the number of years elapsed, and applying the result to the quantities given in the table. If the required date be earlier than 1908, the signs of the annual variations must be changed. In applying the corrections, to reduce to any other date, to the Declinations, it must be borne in mind that N. Declination means + and S. Declination —, and that the corrections must be added algebraically.

γ	Cassiopeiæ	var.	0	35 16.8	+ 3.38	+56	1 58	+19.8	<i>Configuration of Jupiter's Satellites.</i> This column exhibits, at the particular hour mentioned, the respective position of Jupiter and his Satellites as seen in an inverting telescope. The white circles represent the Planet, and the numerals 1, 2, 3, and 4 the respective Satellites: a black circle is intended to show either that the Satellite whose numeral it stands in the place of is in the shadow of the Planet (eclipsed) or else is behind the disc of Jupiter (occulted); the sign $\wedge$ indicates that the Satellite in question is on the disc of the Planet.

Mean Solar into Sidereal Time with the help of the table in the Appendix.

Following the Phases of the Moon on the first page of each month there will be found, as well as the times of Apogee and Perigee, the corresponding distances from the Earth to the nearest 100 miles.

The mean distance of the Moon from the Earth is 238,840 miles.

Under the head "Eclipses, Occultations, and other Celestial Phenomena," in each month, will be found the "Mean Time of the Sun's Semidiameter passing the Meridian" for the 5th and 20th days. This will be useful in determining time by the Dipleidoscope or similar instrument, when, from the interference of clouds, &c., only one limb of the Sun is observed. From the values on the 5th and 20th, that for any other day can be easily inferred with sufficient accuracy, the change in the apparent semidiameter being very slow.

α^1 Herculis, magnitude ranges from 3.1 to 3.9. β^1 Lyre, magnitude ranges from 3.4 to 4.5.

α CENTAURI.

It is supposed that this star, one of the brightest in the Southern Hemisphere, is the nearest of the fixed stars to the Earth. Dr. Gill gave to it a parallax of 0.75", which would make its distance from the Earth 275,000 times that of the Sun. At the rate at which light travels through space, it would require four years and four months to reach the Earth from this star.

η Argus, magnitude varies from 1 to 7.5.

STANDARD TIME, referred to the meridian of Greenwich, has been adopted for railways and other purposes in the countries mentioned in the following table:—

Greenwich Time is used in Spain, Belgium, and Holland.

ASTRONOMICAL DEFINITIONS.

THE time used throughout this Almanack, with the one exception of that of High Water at Dublin, is Greenwich Mean Time, or the time which should be shown by a well-regulated clock; the column headed "Sun before or after Clock" gives the difference between mean and apparent time, or the time as shown by the Sun.

Conjunction.—A Planet is said to be in Conjunction with another body when it has the same longitude, and is seen in the same direction in the heavens. It is obvious that in the case of the inferior Planets this Conjunction will be of two kinds—the one when the Planet is between the Earth and the Sun, called *inferior* Conjunction; and the other when at the opposite point of its orbit, with the Sun between the Planet and the Earth, called *superior* Conjunction. The latter is the only kind of Conjunction that can happen to the *superior* Planets, Mars, Jupiter, Saturn, Uranus, and Neptune; the *inferior* Planets, Mercury and Venus, being subject to both kinds.

Opposition.—A Planet is said to be in Opposition when it is distant from the Sun 180° of longitude, at which time it is most brilliant, souths about midnight, and is, generally, at its least distance from the Earth.

Elongation.—The inferior Planets, in their revolutions round the Sun, appear to an observer on the Earth to swing pendulum-like from side to side, being alternately east and west of the Sun; the greatest Elongation is the termination of one of the swings, either east or west; and at these times the Planet appears, when viewed through a telescope, like the Moon in her first quarter if the Elongation be in the east, and like her last quarter if west. Both Mercury and Venus exhibit these phases, passing from new to full while moving from inferior to superior Conjunction, and from full to new again while passing from superior to inferior Conjunction.

Occultation.—It often happens that the Moon in her orbital motion passes before, and hides from a spectator on the Earth, certain of the Fixed Stars, and occasionally one or other of the Planets; these occurrences are called *Occultations*. Among the "Celestial Phenomena" are given the times at which certain of these Occultations take place, as well as the exact point on the Moon's limb where the observer is to look for the phenomenon; this point is reckoned from the true vertex, or highest upper portion of the Moon's image, counting continuously towards the East from 0° to 360° . The disappearance always takes place on the left-hand side of the Moon, and the reappearance on the right, but *vice versa* when viewed through an inverting or astronomical telescope. Stars to the sixth magnitude inclusive have been included in this summary.

Southings.—The Time of Southings is the time at which the heavenly bodies pass the Meridian, and is so called because they are then due south.

The Peerage.

In a broad sense this heading is commonly taken as identical with the one that follows; but there are close upon 130 holders of titles of long-standing nobility who are not members of the Upper House of Parliament, their peerages being those of Scotland or Ireland only. But, as further explained below, there are about an equal number of Peers of those kingdoms who possess additional titles which constitute them members of the Lords, these titles being in a majority of instances, though very far from all, inferior to those by which they are generally known. A considerable complication is the result, but to lessen the trouble of reference we have now arranged all Peers of the same rank under a single alphabet for that rank, distinguishing every Peer whose title is Scottish or Irish, and also such of these as possess Imperial titles in addition. The full details as to each are given under his leading title, and a reference is in every case supplied under any other that he may hold, so that the table of equivalent titles formerly given in this work is no longer needed: a double index will be found in "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE," pages 36-7.

THE HOUSE OF LORDS,

the *Magnum Concilium* of the early chroniclers, consists of the Spiritual Lords of England (the 2 Archbishops and 24 of the Bishops), the Temporal Peers of England, Great Britain, and the United Kingdom, and of Representative Peers of Scotland and Ireland, together with such Scottish and Irish Peers as have also Imperial titles. No Peer can take his seat if he be under age, of unsound mind, or bankrupt. The full Assembly would consist of 3 Princes of the Blood Royal, 2 Archbishops, 22 Dukes, 23 Marquesses, 124 Earls, 40 Viscounts, 24 Bishops, 334 Barons, and 16 Scottish and 28 Irish Representative Peers: total 616. See WHITAKER'S PEERAGE, page 18, for complete table, showing numbers of Life Peers, Minors, &c. There are also 12 Ladies who are Peeresses in their own right, whose titles and names, along with those of Scotland, are given below at page 100. Female succession may occur in the Imperial Peerage in any Barony of England which was conferred by writ of summons; but it is subject to the rule of *abeyance* whenever there are more than one daughter, sister, &c., eligible to succeed. There are also a few cases in which "special remainders" have been granted to female relatives in the absence of males. We use the term "Imperial" as including the three series of Peers of "England" (up to June 20, 1707), "Great Britain" (thence till close of 1800), and "United Kingdom" (1801 onward).

SCOTTISH AND IRISH PEERS.

There are in all 87 Scottish Peers and 175 Irish, but of the total 262 there are 133 possessing Imperial titles and 129 without them. Of the 87 Scottish, 51 have Imperial titles and 16 are elected or re-elected every Parliament to sit in the Lords; and similarly of the 175 Irish 82 hold Imperial titles, and 28 are elected for life. Of the Imperial titles of the two kingdoms there are 76 which are inferior to the native ones, 30 are superior, 12 are identical in rank but differing in designation, and 15 are absolutely the same. Of the 3 Scottish Peeresses cited on page 100, that of Melfort is subject to a degree of doubt, so that the lady does not assume it. There are other lines in the Scottish Peerage which are open to female succession, and this is not subject to *abeyance* as in England. In the Irish Peerage, on the other hand, the only titles open to female succession are the Massereene Viscounty and the La Poer Barony, the latter now held by the Marquess of Waterford. It will be observed that Ireland possesses a great advantage over Scotland in the Lords as it does in the Commons, its native Peers who hold Imperial titles numbering, as just stated, 82 as against 51 of Scotland, and its elected Representative Peers 28 as against 16. An Irish Peer who holds no Imperial title has also the special privilege of being able to seek election to the Commons for any constituency not in Ireland itself.

Contractions.—S. or I. appended to the date of creation denotes a *Scottish* or *Irish* title; the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as *Engl.*, *Brit.*, or *U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. A † appended to S. or I. implies that the Peer is an elected Representative to the House of Lords. For the mark † see heading to Marquesses; b. signifies *born*; s., *succeeded*; m., *married*; w., *widower or widow*; d., *divorced*; M., *minor*.

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron degrades to the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife. For fuller tables see "WHITAKER'S PIERAGE, BARONAGE, AGE, KNIGHTAGE AND COMPANIONAGE," pp. 73-75.

There are three Orders confined to Ladies: The Order of Victoria and Albert, the Crown of India, and the Royal Red Cross. But members are entitled to no special precedence.

LOCAL PRECEDENCY.—No written code of county or city order of precedence has been promulgated, but naturally in the county the Lord Lieutenant stands first, and secondly the Sheriff. In London and other Corporations, the Mayor stands first, after him the Aldermen, Sheriff, Chief Officers, and Livery. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

The House of Commons.

THE second Parliament of King Edward VII. was elected in January and February, 1906, and was opened by the King on 19 Feb. of that year. The General Election had returned 512 Ministerialists (374 Liberals; 54 Labour Members; 84 Nationalists) and 158 Opposition (131 Conservatives and 27 Unionists), distributed as shown in the following table:—

	DISTRIBUTION OF MEMBERS.				POSITION AS TO PARTIES (1906).		
	Counties.	Boroughs.	Univer- sities.	Total Members.	Ministerial.	Opposition.	Majority.
England	234	226	9	465	337	128	209 Min.
Wales	19	11	—	30	30	0	30 Min.
Scotland	39	31	1	71	61	11	50 Min.
Ireland	85	16	2	103	84	19	65 Min.
United Kingdom	377	284	9	670	512	158	354 Min.

From 1 Nov., 1906, to 31 Oct., 1907, there were bye-elections at *Brigg (C.)*, *Bury St. Edmunds, Colne Valley (Lab.)*, *Derbyshire, N.E.*, *Halifax*, *Hexham*, *Hornsey*, *Huddersfield*, *Jarrow (Lab.)*, *Kirkdale*, *Monmouthshire, N.*, *Rutlandshire*, *Staffordshire, N.W.*, *Stepney*, *Wimbledon*; *Anglesey*; *Aberdeen City*, *Banffshire*, *Perth City*; *Belfast, N.*, *Down, W.*, *Galway City*, *Kilkenny, S.*, *Longford*, *S.*, *Monaghan, N.*, *Tyrone, N.*, *Westmeath, S.*, *Wicklow, E.* Constituencies in italics were won by the political party indicated in parentheses.

At the time of going to press there were vacancies at *West Hull* and *County Carlow*.

On 18 Nov., 1907, the parties stood as follows: Liberal and Labour, 397; Labour (L.R.C.) Members, 32; Socialist, 1; Nationalists, 83. Ministerial total, 512. Conservatives (exclusive of *Worcester City*), 128; Liberal Unionists, 29. Opposition total, 157. Ministerial majority, 355.

The total number of electors upon the register in 1907 is given below, together with the Registrar-General's estimate of the population in the middle of the year 1907:—

Division.	Electors.	Population.
England and Wales ...	6,000,933	34,945,600
Scotland	754,852	4,776,163
Ireland	690,841	4,378,568
United Kingdom	7,446,626	44,100,231

POLITICAL PARTIES AND ORGANISATIONS.

The principal political organisations are as follows:—

LIBERAL.—The *National Liberal Federation*, 12, Parliament Street, Westminster, S.W., founded at Birmingham 31 May, 1877, is a federation of Liberal Associations in England and Wales. The *Liberal Central Association* is the Parliamentary department, and the *Liberal Publication Department* issues periodical literature and political magazines. Among other organisations the *National Reform Union*, 5, Cross Street, Manchester, and 50, Parliament Street, S.W., founded in 1864 for the advocacy of electoral reform and opposition to the Corn Laws, aims at inculcating Liberal principles by means of lectures, &c.; the *Eighty Club*, 1, Hare Court, Temple, E.C., was founded in 1880, and works on similar lines; the *Liberal League*, 34, Victoria Street, S.W., is the outcome

of Lord Rosebery's speech at Chesterfield advocating the abandonment of Home Rule and certain other matters which had accrued to Liberal programmes during recent years; *Home Counties Liberal Federation*, 42, Parliament Street, S.W.; the *London Liberal Federation*, 41, Parliament Street, S.W.; the *Women's Liberal Federation*, 124, Victoria Street, S.W.; and the *Women's National Liberal Association*, 138, Palace Chambers, S.W. The *Scottish Liberal Association* and the *Scottish Women's Liberal Association* are at 7, West George Street, Glasgow. The *Chief Liberal Whip* (Patronage Secretary to the Treasury) is the Rt. Hon. G. Whiteley. *Other Whips*, J. A. Pease, J. H. Lewis, Capt. C. W. Norton, and J. H. Whitley, with the Master of Elibank for Scotland.

CONSERVATIVE.—The *National Union of Conservative and Constitutional Associations*, St. Stephen's Chambers, Westminster, S.W., is a federation of Conservative and Constitutional associations in England and Wales. The *Conservative Central Office* is the Parliamentary department, the *Principal Agent* being Col. A. B. Haig. The *National Union of Conservative Associations in Scotland* is at 119A, George Street, Edinburgh. The *Primrose League*, 64, Victoria Street, S.W., founded in 1883, is the educating body, and aims at the Maintenance of Religion, of the Union, and of the ascendancy of the British Empire: *Grand Master*, Rt. Hon. A. J. Balfour, M.P.; *President Ladies' Council*, Miss Balfour; *Registrar*, F. Willis; *Clerk of the Council*, R. Bennett. The *Conservative Whips* are Sir A. Acland Hood, Viscount Valentia, H. W. Forster, Victor Cavendish, Lord Balcarras, Marquess of Hamilton, and H. P. Pease.

LIBERAL UNIONIST.—The *Liberal Unionist Council*, 6, Great George Street, Westminster, was formed in 1886, and re-constituted in 1904. Its main object is the prevention of the separation of the governments of Great Britain and Ireland. *President*, Rt. Hon. J. Chamberlain, M.P.; *Sec.*, J. Boraston.

LABOUR.—The Labour Party in Parliament is composed of 31 *Labour Representation Committee* nominees, 11 representatives of the *Miners' Federation*, and 14 *Trade Union* and other representatives. The Parliamentary organisation is the *Labour Representation Committee*, 28, Victoria Street, Westminster, S.W., which selects candidates, pays a proportion of the *Returning Officers'* expenses, and contributes £200 a year towards the maintenance of elected members.

Sec., J. R. Macdonald, M.P. The *Labour Whips* are D. J. Shackleton and J. R. Macdonald.

SOCIALISTS.—The *Social Democratic Federation*, Chandos Hall, 22A, Malden Lane, Charing Cross, W.C., and the *Independent Labour Party*, 10, Red Lion Court, Fleet Street, E.C., have many aims and some members in common. The *Fabian Society*, 3, Clement's Inn, Strand, W.C., preaches an intellectual Socialism to the middle classes.

IRISH PARTIES.—The *United Irish League* represents the Nationalist Party, and the *Irish Unionist Alliance* the Unionists. The *Nationalist Whips* are Capt. A. J. C. Donelan, P. O'Brien, E. Haviland Burke, and J. P. Boland.

TARIFF REFORM.—The *Tariff Reform League*, 7, Victoria Street, Westminster, S.W., was founded in 1903, in furtherance of Mr. Chamberlain's proposals for the reform of the Fiscal System of the United Kingdom. Sec., T. W. A. Bagley.

WOMEN'S SUFFRAGE.—The principal organisation for putting forward the claims of women to the Parliamentary franchise are the *National Union of Women's Suffrage Societies*, 25, Victoria Street, Westminster, S.W.; the *Central Society for Women's Suffrage* (at the same address); the *Women's Social and Political Union*, 4, Clement's Inn, W.C.; the *Lancashire and Cheshire Women's Textile Workers' Representation Committee*, 5, John Dalton Street, Manchester; and the *Women's Co-operative Guild*, Kirkby Fensdale. The offices of the *Women's Local Government Society* are 17, Tothill Street, S.W.

RESIGNATION OF MEMBERS OF PARLIAMENT.—No member of the Commons can resign his seat; he must apply for some office of profit under the Crown, and so vacate his seat under the Act of Settlement (6 Anne, c. 7), and the usual practice is to apply for the Stewardship of the *Chiltern Hundreds*, or of the Manor of Poyntings, or Northstead, or the Escheatorship of Munster, whereupon the seat is declared vacant and a writ issued.

AUTUMN SITTING, 1906.

MERCHANT SHIPPING.—The House assembled on Oct. 23, and the Merchant Shipping Bill was proceeded with, and was read a third time on Nov. 22. In the Lords it was read a second time on Nov. 27; third, on Dec. 14; and finally passed on Dec. 20.

PLURAL VOTING.—On Oct. 24, the Plural Voting Bill was discussed in the Commons and strongly opposed; but all attempts at amendment were rejected, and, with the assistance of the closure, the Bill was pushed through, and was read a third time on Dec. 3. It was read a first time in the Lords on Dec. 4, but on the 10th it was thrown out.

EDUCATION.—On Oct. 25 the Lords began their examination of the Education Bill, and on the 29th Lord Llandaff moved to postpone Clause 1, but this was withdrawn; an amendment, by Lord Heneage, the same as the Archbishop of Canterbury's, was passed by 256 to 56. On the 30th, Clause 1, as amended, was added, and on the 31st, Clause 2, after the Archbishop of Canterbury's amendment had been accepted by 209 to 47, was added also. After three days' debate, Clause 3 (Religious Instruction) was, with alterations, passed; and Clause 4, after amendments had been passed by 256 to 48, 233 to 83, and 152 to 42, was on Nov. 7 made part of the Bill. Many amendments were made before

the Committee finished, and on Dec. 6 the Bill was read a third time. For three days the Commons discussed the question whether they should consider these amendments, and decided by 416 to 107 to reject them "as a whole." Some attempt was made at conciliation by the Lords, but in the end they accepted Lord Lansdowne's motion, that they should insist on their amendments, by 132 to 52, and on the 20th it was announced in the Commons that the Bill would be dropped.

EDUCATION (Free Meals for School Children) Bill was read a third time in the Commons on Dec. 13, and in the Lords on the 20th.

WORKMEN'S COMPENSATION.—The Workmen's Compensation Bill, in which the Home Secretary introduced Domestic Servants late in Committee stage, was read a third time in the Commons on Dec. 13, and in the Lords on Dec. 19.

TRADE DISPUTES.—The Bill upon this subject, which had been read a third time in the Commons on Nov. 9, after Lord R. Cecil's attempt to re-commit the Bill on Clause 5 had been defeated by 220 to 46, was read a second time in the Lords on Dec. 4, and, not without a few amendments, was read a third time on Dec. 14. These were modified by the Commons, and on the 19th the other House agreed to the changes.

LAND TENURE.—On Nov. 6 closure was moved and carried to expedite this Bill, and Mr. Balfour's motion for adjournment was lost by 342 to 115. On the 23rd, motion for its rejection being defeated by 260 to 27, the Bill was read a third time. It was read a second time on Dec. 5 in the Lords, and a third time on Dec. 19. There was some disagreement as regards the alterations made in the Bill, but this was finally overcome.

TOWN TENANTS.—The Town Tenants (Ireland) Bill was read a third time on Nov. 30, and in the Lords a third time on Dec. 18; later on the Houses came to terms on their modification, with a proviso as to time of claim.

PUBLIC TRUSTEE.—The Public Trustee Bill was passed on Dec. 20.

SESSION 1907.

KING'S SPEECH.—On the 12th of February, 1907, the Second Session of his Second Parliament was opened by the King in person, accompanied by the Queen, and in the Royal Speech, in which the so-called differences existing between the Lords and the Commons were referred to, the members were called upon to consider: Licensing Reform; the Reconstitution of the Military Forces; Holdings and Valuation of Land in Scotland; Court of Criminal Appeal; Labour in Mines; Women to serve on Local Bodies; and Small Holdings and better housing of the people. In the Lords the address was moved by Lord Castletown and seconded by the Earl of Chichester. Lord Lansdowne reviewed the policy of the Government adumbrated in the Speech, Lord Ripon replied, and the address was agreed to. In the Commons, Mr. J. Tennison moved the address and Mr. Rainy seconded. Mr. Balfour opened the criticism of the Opposition, the Premier replied, and the debate finished on Feb. 20. During this period, amongst the amendments and censures, Sir G. Parker called attention to the case of the New Hebrides, to which Sir E. Grey replied; Mr. Barnes moved an amendment on Old Age Pensions, meeting with the sympathy of the Government, who could not make any immediate promises; Mr. J. Mason called attention to agriculture, which led to both sides speaking in

favour of more attention being given to farming interests. Lord Percy moved an amendment to postpone the "Lords" question, and Mr. J. W. Hills one regretting no mention on Colonial Conference.

THE "LORDS" QUESTION.—Lord Newton's Bill for the reform of the House of Lords was read a first time on Feb. 21, but was withdrawn on May 7, when Lord Cawdor's motion, after Lord Crewe's amendment had been refused by 198 to 46, was agreed to, and later on a Committee was appointed. On June 26 the Prime Minister's motion on the House of Lords, after a three days' debate, was accepted by 432 to 147.

SMALL HOLDINGS.—On March 19 the Small Holdings (Scotland) Bill was introduced and was read a first time, and on April 30, after Mr. Ferguson's amendment had been defeated, a second time. Mr. Balfour moved for a Committee of the whole House, but this was refused. On Aug. 5 Sir H. Campbell-Bannerman moved and carried the closure, and on the 6th Mr. Long's new clause was lost by 176 to 120, and his amendment on Clause 1 by 263 to 82; and under the guillotine the other clauses added without discussion, and the Bill was read a third time on Aug. 8. On motion for second reading in the Lords, Lord Balfour moved that the House decline to proceed with the measure; Lord Rosebery said he should not vote for a Bill which would "introduce into the healthy body corporate of Scotland the poisonous bacillus of the Irish Agrarian system"; Lord Carrington defended the Bill; Lord Lansdowne pointed out that there was no justification for exceptional legislation in Scotland outside the Crofter area; he proposed to postpone the second reading until they had the English Bill before them, and this was carried by 162 to 39. On Aug. 22 Sir H. Campbell-Bannerman said that as the Lords appeared to intend alterations in the Bill so that it would not carry out the intention of the Government, it would be dropped.

The English Small Holdings and Allotments Bill was presented for discussion after it had been amended by the Standing Committee. On Aug. 14, the third day allowed, the amendments were defeated, and some not considered, and the Bill was reported. On the debate on third reading, on Aug. 16, Mr. Balfour warned the Government against building exaggerated hopes on the basis of this legislation; Sir H. Campbell-Bannerman answered with vehemence that the Government would not accept from the Lords any alteration that impaired its efficiency, and after being read amid loud Ministerial cheers was sent to the Lords, where, on Aug. 19, it met, if not an entirely friendly, a kindly and sympathetic reception. On Aug. 21, 22, and 23 the Bill was discussed and some few amendments were made and the Bill was passed.

THE BUDGET.—Mr. Asquith produced his Budget on April 18. He proposed to reduce the income tax on earned incomes under £2,000 to 4s., leaving the tax on unearned incomes at 1s.; to increase the death duties on amounts over £50,000, with a further tax (super tax) on amounts over £1,000,000. He estimated that the revenue at existing taxation would be £44,190,000; the deduction in income tax would reduce this by £2,000,000, and the increase in death duties would add £233,000. The expenditure for the year he estimated at £40,757,000, and after deducting the grant to

schools of £200,000, and allocating £1,500,000 towards paying off the National Debt, there would remain £333,000 for contingencies. This led to some strong criticism, and Mr. Austen Chamberlain pointed out that the continuance of this high rate of taxation allowed for no expansion in case of emergency, that the Budget was not a radical one, and also that it would not assist the working man. Strong opposition was shown to the income tax being made a permanent impost in times of peace, while the tax on tea, and indeed all indirect taxation, was objected to by many, notably by Mr. McKenna, who said he wished all indirect taxes to be abolished and the revenue to be raised by income tax and death duties. The attempts to alter the terms of the Budget having failed, the Finance Bill was read a third time on July 30.

SUPPLY.—Supply (Estimates) began on Feb. 1, and as usual led to discussions on many subjects of more or less importance. On Aug. 1 (the 20th day), after Mr. Bonar Law had strongly condemned the action of the Government as regards the Sugar Convention, pointing out that the Convention had increased the exports of sugar and had added no burden to the consumer, the price of sugar having fallen 1s. and 2s. per cwt., the Automatic Closure came into force, and the remainder of the votes were agreed to without question; and the Appropriation Bill was read a first time, and on Aug. 21 the Bill was read a second time in the Lords and passed through its remaining stages.

THE INDIAN BUDGET.—Mr. Morley read his Indian Budget on June 6. It showed a further reduction in the Salt Tax and in the Revenue from Opium, and he said that it was intended to reduce the Military expenditure by half a million sterling. He justified his action as regards the native disorders, this being in general approved by the Opposition.

ARMY.—On Feb. 25, in the Army Estimates, Mr. Haldane outlined the proposed changes in the land forces, principally as regards the Militia, Yeomanry, and Volunteers. On March 4 he introduced his Bill for the establishment of County Associations and for the forming of a Force to be called the Territorial (or Home) Force, intended to absorb the Militia, Yeomanry, and Volunteers. On order for second reading, on April 9, Mr. Wyndham moved an amendment to the effect that the new arrangement, while not providing an adequate force for Home Defence, would fail to supply a prompt support for the Regular Army in the field. This was defeated on April 23 by 388 to 109, and the Bill was read by 343 to 31. On May 28, in Committee, Mr. Balfour spoke against the destruction of the Militia. The Bill was read a third time on June 19 by 286 to 63. On second reading in Lords, Lord Roberts congratulated Mr. Haldane on his modified views, but regretted his giving way on drill and military training in schools, and considered the scheme would not provide for protection overseas nor for home defence. In Committee, the Earl of Portsmouth announced the concessions of the Government as regards the Militia; Lord Methuen's amendment on the training of boys was accepted by 130 to 31; and on July 23, after more amendments had been made, the Bill was passed.

NAVY.—In Navy Estimates Mr. E. Robertson sketched out the policy of the Government on naval affairs. After pointing out their views as to economy, he said that two ships of the Dread-

nought type were to be constructed, and he endeavoured to show that we were keeping up to more than the two-standard principle. The opposition differed from this, Mr. Lee and Mr. Balfour pointing out what they considered the illogical conclusions in the statement, which had been backed up by the Premier. On July 4, Lord Tweedmouth, in answer to Lord Cawdor, gave a detailed description of the Navy, asserting that it was in an efficient condition, that the Government were not basing their action on false economy but upon the advice of experts of large experience. Lord Cawdor expressed his satisfaction, and the subject was dropped.

PROCEDURE RULES.—Sir H. Campbell-Bannerman produced his new Procedure Rules on March 20. On April 11, motion for precedence in discussion was carried by 324 to 89, and the suspension of the 10 o'clock Rule by 320 to 90. On the question that most Bills read a second time be referred to Standing Committees, Sir F. Banbury moved to exempt Bills dealing with powers of the Crown or of either House of Parliament; this motion was rejected by 313 to 65. On April 16 the "guillotine," which had been carried the previous day by 289 to 87, caused the Rules to be passed under pressure. It was understood that there could not be more than four Standing Committees—two new and two old, or four new—and that the House could transfer to the new Standing Committees the Bills now sent to the old ones. Bannerman's Resolution on New Procedure was carried by 359 to 124—majority 235.

IRELAND.—During the discussion on the new Rules, Mr. Birrell had observed that the Irish Council ("Devolution") Bill would remain in the House, and he hoped it would have a happy and peaceful passage. On May 7 the Bill was introduced, but it met with such strong opposition that it was under the limitation of the closure that it was read first time—for, 426; against, 121. On June 3, Sir H. Campbell-Bannerman stated that this and the University Education (Ireland) Bill would be abandoned. Mr. Birrell introduced his promised Evicted Tenants (Ireland) Bill on June 27. On motion for second reading on July 3 there was a long discussion, and after an amendment had been rejected by 315 to 98, the Bill was read a second time. On July 17 and 19 it was in Committee; the Premier's guillotine resolution was carried by 293 to 85, and several amendments were rejected, and on July 23 the Bill was reported. It was read in the Lords a second time on Aug. 6, after a long discussion opened by Lord Lansdowne. It was resumed on Aug. 9, when the amendments were not as numerous as might have been expected, but tended to modify greatly the Bill; Lord Atkinson's, to leave out the first subsection and insert a new one, was held by Lord Crewe to wreck the Bill, but it was carried by 153 to 34; Lord Lansdowne's, to limit the number of tenants to be dealt with to 2,000, was agreed to. On Aug. 12 Lord Atkinson's amendment to Clause 2 was agreed to, and some other alterations having been made, the Bill passed through Committee stage. On Aug. 15 the Report was agreed to after it had been decided, on a division, that the Act should cease to have effect after three years, instead of four, as proposed by the Government. The Commons objected to some of the amendments, and made their own amendments on them, but on Aug. 27 the Lords agreed in the main with these, and in the King's Speech,

read at the closing of the Session, he was able to place this Bill amongst those he had given his assent to.

COURT OF CRIMINAL APPEAL.—Sir J. Lawson Walton introduced this Bill on April 17, and it was read a second time on May 30, after Mr. Rawlinson's motion that it be read that day six months had been rejected without division, and was referred to a Standing Committee. The amendment of the committee having been passed by the Commons, the Bill was examined in committee in the Lords on Aug. 8, when various amendments were agreed to, Lord Halsbury's, that a certificate from the judge who had tried the case be required, being accepted by 54 to 32, and on Aug. 16 it was read a third time, subject to amendments, which were agreed to by the Government.

PATENTS.—Mr. Lloyd-George introduced his Bill for the reform of the laws relating to patents on March 19. This Bill, which escaped being a Party question, was read a third time on Aug. 13, and passed the Lords on Aug. 26.

DECEASED WIFE'S SISTER.—The Marriage with Deceased Wife's Sister Bill was read a second time in the Commons by 263 to 34. In the Lords an amendment to make it not retrospective was defeated, and one not to make it compulsory for a clergyman to perform the service in these cases was accepted, and the Bill was passed on Aug. 26 by 98 to 54.

SCOTLAND.—The Land Values (Scotland) Bill was considered on Report on Aug. 20. Mr. Harold Cox's amendment was defeated by 248 to 58, and Mr. Cochrane's by 238 to 51; and Mr. Balfour's and other amendments having failed, the Bill was read a third time by 172 to 33. It was introduced in the Lords for second reading on Aug. 26, when Lord Robertson moved that the House decline to proceed with a measure that would do nothing but mischief. A long discussion ensued, Lord Lansdowne remarking that it was impossible to consider a Bill thrust upon them at so late a date, and Lord Robertson's motion was agreed to by 118 to 31.

Premiers, Principal Secretaries,

Premiers and Secretaries of State.—The inability of George I. to understand the English language made his attendance at meetings of the Cabinet "useless and irksome," and allowed the appearance of a Prime Minister, for his example has been so consistently followed as to have become a settled custom." In old times the Chief Minister was the Chancellor, whose office originally included, besides its legal functions, the duties now performed by certain of the

Secretaries of State. The first mention of a King's Secretary of State is under Henry III. In 1433, owing to press of work in France, two Secretaries were appointed, and under Henry VIII. there were still two. Under Elizabeth we find one Secretary only in the early years of her reign, but afterwards two, and until 1794 two seems to have been the normal number; though from 1707 to 1746 we find a third Secretary for Scottish, and from 1768 to

1782 a similar Secretary for Colonial business. From 1688 to 1782 one of the two dealt with matters pertaining to the Northern States of Europe, the other with matters pertaining to the Southern States, Home, Irish, and Colonial business. In 1782 the former became Foreign and the latter Home Secretary, still retaining Irish and Colonial business. The Home Secretary was also responsible for the Secretary at War, who, though

not a Secretary of State, directed the movements, payment, and civil control of the Army. In 1794 a Secretary of State for War was appointed to manage all military business, and in 1801 he was given the control of the Colonies. In 1854 the Secretary of State for War was relieved of Colonial business, and a fourth Secretary of State was appointed for the Colonies. In 1858 the Secretary of State for India was appointed.

ADMIRALTY, Whitehall, S.W.

The management of all maritime affairs, the government of the Royal Navy, jurisdiction in maritime cases, and the appointment and commissioning of Naval Officers, was in early times the province of the "Lord High Admiral," the ninth Great Officer of State. The judicial functions of the office have long been vested in other hands, and the office itself has been "in commission" since 1708 (except for a short time in 1867, when the Duke of Clarence was Lord High Admiral, the duties being performed by "Commissioners for executing the office of Lord High Admiral of the United Kingdom." These Commissioners, or "Lords of the Admiralty" as they are more generally called, consist of a Political "First Lord" (who, by virtue of the importance of his office, is a Cabinet Minister), a "First Sea Lord," "Second Sea Lord," "Third Sea Lord and Controller," and a "Fourth Sea Lord," now always selected from Officers of the Service, with a Political "Chief Lord." There is also a "Parliamentary and Financial Secretary" and a non-political Permanent Secretary. The net amount provided for the Admiralty in 1903-4 for salaries, &c., of the Board and subordinate officials is £354,600.

AGRICULTURE AND FISHERIES, Board of.

4 Whitehall Place; 3 St. James's Square, and 3 Dohahy Street, S.W.

The Board of Agriculture was established by the Act of 1880, when they were transferred to it the duties of the Privy Council in connection with Diseases of Animals, and the functions of the Land Commissioners for England. Technically, the membership of the Board is analogous to that of the Local Government "Board," and "Board" of Education, but in effect the establishment consists of a President, Secretary, Assistant Secretaries, &c., and its main functions are to prevent the introduction or spread of certain diseases among animals, to deal with insect and fungus pests, to collect and distribute information relating to agriculture, horticulture and forestry in Great Britain, to administer the Grant voted by Parliament to the Board for Agricultural Education in England and Wales, to collect and publish agricultural statistics, to administer the Fertiliser and Feeding Stuffs Act and the Sale of Food and Drugs Acts in Great Britain so far as the latter relate to agricultural produce, to control the redemption of tithe rent charge and the enclosure of common land, to enfranchise copyhold land, to administer the Small Holdings and Allotments Acts and the Acts relating to the improvement of land by private owners, and to administer the Acts relating to Sea, Salmon and Freshwater Fisheries as regards England and Wales. The Board also publish a monthly "Journal," pp. 47. By the Board of Agriculture and Fisheries Act of 1903 certain powers and duties formerly exercised by the Board of Pesticides and Fisheries were transferred to this Department, the designation of which was at the same time altered. The Board also control the Ordnance Survey of the U.K., which is the subject of a separate Voto. By an Order in Council of 23 March, 1903, the

supervision of the Royal Botanic Gardens, Kew, was transferred to the Board. The cost of administration in the financial year 1907-8 was estimated at £127,840.

CUSTOMS ESTABLISHMENT, E.C.

Commissioners of Customs were first appointed in 1271 and housed by the King in London, the present "Long Room" replacing that built by Charles II. and rebuilt after destruction by fire in 1718 and 1824. In 1830 the Customs business of Ireland was transferred to London. The Board of Customs (consisting of a Chairman, Deputy Chairman, and a Commissioner) is one of the four great Revenue-collecting bodies, and for this purpose exacts the duties prescribed in the Finance Act of each year and pays the moneys received into the Bank of England for the Exchequer account. The revenue derived from Customs in the financial year 1906-7 amounted to £34,877,821, and the cost of collection (at the hands of Custom House officers in the various ports) to £932,700, being £73,350 for the superintending establishments, £705,320 for the port establishments, and £206,033 for remunerations, &c.

DURHAM, COUNTY PALATINE OF.

"Palatine" privileges were granted to the Bishop of Durham by the Northumbrian Prince Guthrum and exercised by the Prelate until arrogated by the Crown in 1265. Palatine counties were erected for the defence of neighboring kingdoms against the Welsh and Scots, and were in reality self-contained kingdoms in alliance with their creator. The ancient customs of the County Palatine of Durham are in a great measure retained, the administrative authority being exercised on behalf of the Crown.

EDUCATION, BOARD OF, Whitehall, S.W.

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to super-vise the distribution of certain grants which had been made by Parliament since 1834, and consisted of the Lord President, the Secretaries of State, the First Lord of the Treasury, the Chancellor of the Exchequer, and a Vice-President. The Board of Education Act, 1899, abolished the Committee of the Council, established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Grants towards Elementary Education in 1907-8 were estimated at £1,581,485; towards Secondary Education, including the Training of Teachers, &c., at £8,172,245; towards Technical Education, Colleges, Museums, &c., £608,048; cost of administration (including Inspection) £439,593.

The Comptroller and Auditor-General was appointed
by Letters Patent under 29 & 30 Vict. c. 39 § 3 (1866), in place
of the Comptroller-General of the Exchequer and the
Commissioners for Auditing the Public Accounts, whose
duties were handed over to him. The main functions of
the office are: (1) In regard to the Exchequer:—The
examination of the daily accounts of revenue and other
public moneys paid into the Banks of England and
Ireland to the account of His Majesty's Exchequer; the
examination of the quarterly accounts of the Income
and Charge of the Consolidated Fund, in order that the
Banks may be authorised to make advances in the case
of any deficiency; and also the grant of credits for
issues from the Exchequer, not exceeding the amounts
sanctioned by Parliament. (2) In regard to the Audit of
the Public Accounts of the United Kingdom:—To
ascertain that money expended has been applied to the
purpose for which the grant of Parliament was intended
to provide; that the expenditure is supported by proof
of payment, and generally to verify the correctness of
the Accounts and to report to Parliament thereon. The
expenses of the Department were estimated at £64,400 in
1907-8.

(Office hours 11 to 6.)

The Secretaryship of State for Foreign Affairs was
created in 1782, superseding the ancient Secretary for
the Northern Department of Europe (as the Office had
been called since 1693). He is assisted by two Under-
Secretaries (one Parliamentary, the other Permanent),
three Assistant Under-Secretaries, a Librarian, a Head of
the Treaty Department, and a staff of Clerks. The chief
functions, in addition to the formal duties, are receiving
and answering communications from individuals or
other Government Departments, from Diplomatic and
Consular Agents of this country or others, and in deter-
mining the policy of the country towards Foreign
Powers. The administrative expenses of the Foreign
Office were estimated at £64,698 in 1907-8.

HOME OFFICE, Whitehall, S.W.

The Secretaryship of State for Home Affairs was created in 1782, the duties having previously been assigned to the "Southern" Secretaryship, which embraced the affairs of the United Kingdom, Ireland, and the Colonies, and also Southern Europe. By the appointment of the "Home" and "Foreign" Secretaries the duties were divided in accordance with the names of the Offices, the former retaining Irish and Colonial business, and until 1794 War business also. In 1801 the Colonial business was also removed. The Home Secretary is the medium by which the Sovereign acquaints his people of his pleasure, and a channel of communication with the Sovereign, and his main functions are the maintenance of the King's peace, the enforcement of rules made for the internal well-being of the community, and the exercise of the prerogative of mercy. The administrative expenses of the Home Office were estimated at £198,735 in 1907-8.

INLAND REVENUE OFFICES,

Somerset House, W.C.

"Inland Revenue" is derived from Excise, Death Duties, Stamps, and Taxes, and is partly collected by the Post Office. The principal share, however, is collected by the Board of Inland Revenue, established in 1849, and consisting of a Chairman, Deputy-Chairman, and two Commissioners, with Joint Secretaries, Assistant Secretaries, and a staff of officials. The estimated cost of the Department in 1927-8 was £2,299,300 (the establishment charges of the Chief Office being £321,935), and the amounts collected under the various heads above specified reached a total of over £98,500,000 in the financial year 1926-7.

LANCASTER, DUCHY OF.

Office, Lancaster Place, Strand, W.C.

Lancaster was erected into a "Palatine" Duchy by Edward III. for his son John of Gaunt in 1359, but in 1399 merged into the Crown through the accession of Henry IV. Its revenues have always been kept separate, though vested in the Sovereign and his heirs. The Judicature Act has left only the Chancery Court of the Duchy, but while the Chancellor is a Political Officer of the Government, and may or may not be learned in the law, a lawyer is appointed Vice-Chancellor. The accounts of the Duchy for the year 1905-6 will be found on p. 335.

METEOROLOGICAL OFFICE,

63 Victoria Street, S.W.

The Meteorological Office was established as a Department of the Board of Trade in 1854. Changes have been made from time to time in the management, and the control is now vested in a Director and Committee appointed by the Lords Commissioners of the Treasury. The work of the office includes the collection and discussion of meteorological observations from all oceans, the maintenance of a number of stations for daily telegraphic reports upon which forecasts and storm warnings are based, and other work incidental thereto. The administrative expenses are met by a Government grant, which amounts to £15,500 annually.

Director and Chairman of Committee, W. N. Shaw, LL.D., S.O.D., F.R.S.

Marine Superintendent, Comm. M. W. Campbell Hepworth, C.B., R.N.R.

MINT, THE ROYAL, Tower Hill, E.

The Royal Mint, as now constituted, may be said to date from 1817, and the buildings from 1820, the latter being completed in that year at the cost of over £250,000. In 1870 the Coinage Act abolished the ancient post of Master of the Mint as such, and combined it with that of the Chancellor of the Exchequer. The first known Master (or Warden) of the Mint dates from Henry I., and the last Warden was Lord Maryborough (1814-23), the last Master being Professor Thomas Graham, who died in 1859. The estimated administrative expenses amount to £138,840 for 1907-8.

NATIONAL DEBT OFFICE,

19 Old Jewry, E.C.

The National Debt Commissioners were appointed under 26 Geo. III., c. 31 (1786), by which a permanent Sinking Fund was to be established, and a sum of £250,000 issued quarterly to be applied towards the reduction of the National Debt, being commonly spoken of as "Mr. Pitt's Sinking Fund." In 1829 this was superseded by appropriating the surplus income of the year as the Sinking Fund, and this is commonly known as "The Old Sinking Fund." In 1875 "The New Sinking Fund" was set up by Sir Stafford Northcote (38 Vic., c. 45), and this, with the Old Sinking Fund, now mainly operates in reducing the Debt. The Commissioners are at the present time the Speaker, the Chancellor of the Exchequer, the Master of the Rolls, the Lord Chief Justice, the Paymaster-General, and the Governor and Deputy-Governor of the Bank of England. The administrative expenses of the Board were estimated at £14,753 in 1907-8.

Keeper, D. S. MacColl £350 to £500

NATIONAL PHYSICAL LABORATORY, Bushy House, Teddington.

The National Physical Laboratory, founded in 1899 for standardising and verifying instruments, for testing materials and for the determination of physical constants, is controlled by a Board representing the Royal Society and the great Technical Societies. In addition to capital sums, an annual grant of £6,000 is contributed by H. M. Treasury; and subscriptions from the Technical Societies and other sources amount to about £2,850 a year. The Kew Observatory now constitutes one department of the Laboratory; and there are also departments for Physics, Engineering, and Metallurgy. The Physics Department comprises Thermometric, Electrical, Metrological, and Optical Divisions.

Chairman, The President of the Royal Society.

POST OFFICE.

Chief Office, St. Martin's-le-Grand, E.C.

A House of Commons report in 1844 states: "It is uncertain at what precise period the Crown undertook to be the regular carrier of letters for its subjects." The first "Master of the Posts" was appointed in 1516, but the duty was not then undertaken as a remunerative department of the Government. The Post Office is now one of the three great revenue-collecting departments, and, while efficiently discharging its multifarious duties, shows an annual profit of about £4,000,000, and also collects a large sum for the Inland Revenue Department. The Penny Post was inaugurated in 1801, the Book Post in 1805, the Post Office Savings Bank in 1861, the Post Office Telegraphs in 1868, the Money Order office in 1872, the Postal Orders in 1885, the Parcel Post in 1883, and the Telephone Service in 1892. The administrative expenses of the Post Office were estimated at £17,367,751 in 1907-8, viz.: Postal Services, £11,501,562; Packet Services, £707,059; Telegraph Services (including Telephone Services), £5,159,120. A "Postal Guide," containing the Rates, Rules and Regulations, will be found on pp. 464-470.

TREASURY, Whitehall, S.W.

The Lord High Treasurer of England is the Third Great Officer of State, the office having been "in commission" (with certain intervals) since 1612. The Commissioners for executing the office of Treasurer of the Exchequer of Great Britain and Lord High Treasurer of Ireland consist of the First Lord, who, if a Commoner, is, *ex officio*, Leader of the House of Commons, the Chancellor of the Exchequer, and some Junior Lords, with certain Secretaries and a staff of officials. The duties of the First Lord are mainly political, as also are those of the Patronage Secretary and the Junior Lords; the duties of the Chancellor of the Exchequer are mainly financial, in that he performs the ancient duties of the Under-Treasurer and, after agreement with the heads of the great spending departments, arranges for the great collecting departments to provide sufficient moneys to meet the needs of the year. The papers are laid before Parliament in the form of a Budget, which the Chancellor expounds to the House, these plans being accepted, modified, or rejected by the House.

TRINITY HOUSE, Tower Hill, E.C.

Trinity House, the first General Lighthouse and Pilotage authority in the kingdom, was a body of importance when Henry VIII. granted the institution its first charter in 1514, *inter alia* "for the relief, increase and augmentation of the Shipping of this Realm of England." Since that period the duty of erecting and maintaining lighthouses and other marks and signs of the sea has by Royal Charter and Acts of Parliament been entrusted to this Corporation. Until 1854 all light

dues were collected by Trinity House, and until 1874 Masters of the Navy were examined by the Elder Brethren. The present duties of the Elder Brethren have reference to Pilotage, Lighthouses, Buoys, Beacons, &c., and attendance at the Admiralty Court to act as assessors, also to advise the Board of Trade in nautical matters. There are 13 Acting Elder Brethren, of whom 2 are elected from the Royal Navy and 11 from the Merchant Service; there are also 22 Honorary Elder Brethren. The income of the Corporation derived from light dues levied on shipping entering and leaving British ports amounts to £300,000 per annum, which is expended in the maintenance of the Lighthouse and coast-marking system of England and Wales, under the financial control of the Board of Trade. The Corporation also administers certain charitable trusts specifically dedicated to the relief of decayed master mariners and their widows, the accounts in respect of which are rendered to the Charity Commissioners.

WAR OFFICE, Whitehall, S.W.

A Secretary of State for War was first appointed in 1794, the control of the Land Forces of the Crown having been previously exercised by a Secretary at War, who was responsible to Parliament through the Home Secretary. In 1801 the Secretary of State for War was also given the business of the Colonies, of which he was relieved in 1854 by the appointment of a Secretary of State for that purpose. In 1904 an Army Council was created by Letters Patent, and to this Council were thereby transferred all the powers exercised under the Royal prerogative by the Secretary of State for War and the Commander-in-Chief. An Order in Council of the same year fixed the distribution of duties among the members of the Army Council.

MEMBERS OF CONVOCATION.

In theory the Church of England is governed by means of its Convocations of Bishops and Clergy: there is a House of Convocation for each province, Canterbury and York. Each Convocation consists of two Houses, the upper confined to the archbishops and bishops, the lower composed of the dean of every cathedral, the archdeacons, with proctors elected from every cathedral chapter, and two more elected by the clergy of every diocese in the province of Canterbury, and by every archdeaconry in the province of York. A fresh election is made with every new Parliament.

ST. PATRICK'S NATIONAL CATHEDRAL, DUBLIN.

Dean and Ordinary, Very Rev. John Henry Bernard, D.D., D.C.L.

GENERAL SYNOD.

Consisting of House of Bishops (13) and House of Representatives (viz., 208 clerical and 416 lay).

Honorary Secretaries, Ven. Wm. Cokuhorn, B.D.; Ven. I. K. Latham, D.D.; Sir J. C. Meredith, LL.D.; Capt. R. Wade Thompson.

Secretary to the REPRESENTATIVE CHURCH BODY (INCORPORATED 1870), T. Greene, M.A.,
52 St. Stephen's Green E., Dublin.

By the Act of Union, 1800, the Church of Ireland was united with the Church of England, and the Sovereign, as one of its members, supreme governor on earth. By the Act of 1869 this union was severed, and on Jan. 1, 1871, the Church of Ireland resumed her independent position. The Act of 1869 not only disestablished the Irish Church, but also took away her endowments, nothing being left but the right to the life services of the Annuitant Bishops and Clergy (which were commuted for a capital sum), the right to claim churches in use for divine service, the right to buy the See and Glebe Houses (with garden and curtilage), and £500,000 in lieu of private endowments.

The supreme governing body of the Church of Ireland is the GENERAL SYNOD, which meets annually.

Subject to the GENERAL SYNOD are 23 *Diocesan Synods*, which are assisted by smaller elected bodies called *Diocesan Councils*.

The Bishop of the Diocese is chosen by the clerical and lay members of the *Diocesan Synod*. The Primate is chosen by the House of Bishops from amongst their own number.

The incumbent of the Parish is appointed by a *Board of Nomination*, consisting of 7 persons, viz.:—The Bishop, 3 diocesan nominators (2 clerical and 1 lay) appointed by the Diocesan Synod, and 3 parochial nominators (lay) appointed by the registered vestrymen of the parish.

The financial trustees of the Church are the REPRESENTATIVE BODY, composed of the Archbishops and Bishops, 13 clergymen and 26 laymen, chosen by the Diocesan Representatives in the General Synod, with 13 co-opted members (clerical or lay). This body holds the property of the Church, and administers its funds, subject to the General Synod.

The first property it held was the capital sum £7,581,075, representing the life annuities of the Bishops and Clergy paid over as commutation money by the Church Commissioners, and also £500,000 compensation for private endowments. The commutation capital now amounts only to £608,850, charged with annuities to 136 annuitants. The funds, however, in the custody of the Representative Body amount in all to £8,729,941, made up of *Commutation* £608,850, *Parochial Sustentation* £3,410,356, *Episcopal Sustentation* £563,831, *Glebes purchase* £349,475, *Miscellaneous purposes* £1,746,902, and *Balances* £50,585.

Since 1869, members of the Church have paid in to the Representative Body a total sum of £6,525,952. The interest of the Parochial Sustentation Fund is approximately £202,888. The total amount of assessment for stipend paid by parishes, 1906, was £700,939, and the total amount paid for stipends under Diocesan Schemes was £268,073.

The number of members of the Church of Ireland, by the Census of 1901, was 581,029, or 13.0 per cent. of the entire population.

THE CHURCH OF SCOTLAND by law established is Presbyterian in constitution, and is governed by Kirk Sessions, Presbyteries, Synods, and the General Assembly, which consists of both clerical and lay representatives from each of the Presbyteries, and also from the universities and royal burghs. It is presided over by a Moderator (chosen annually by the Assembly), to whom the King has granted precedence in Scotland, during his term of office, next after the Lord Chancellor of Great Britain. The Sovereign is represented by a Lord High Commissioner (appointed each year by the Crown), who receives the sum of £2,000 for his services. The country, for Church purposes, is divided into 16 synods and 84 presbyteries, and there are about 1,800 ministers and licentiates engaged in ministerial work. The Church population exceeds the aggregate of all the other Presbyterian bodies, and is estimated at about

half the whole population of Scotland; the number of communicants in 1906 was 698,566. The sum of £550,077 was raised in 1906 for church and missionary purposes. Within the last 50 years 447 chapels, at a cost of £1,657,320, have been endowed and erected into parishes *quoad sacra*. The original parishes were 924, in addition to which there are 447 new and 42 Parliamentary parishes, a total of 1,413; besides a large number of churches and mission stations. The Presbyterian form of Church government as first set up in Scotland was superseded in 1662 by the Episcopal Church under the Stuarts; but at the Revolution in 1688, Presbyterianism regained the legal establishment, which it still preserves. LORD HIGH COMMISSIONER, Lord Kinnaird.

MODERATOR, 1907, Right Rev. James Mitford Mitchell, D.D. Agent, A. L. Menzies, W.S., 54 Castle St., Edinburgh.

OTHER PRESBYTERIAN CHURCHES.

PRESBYTERIANISM HAS SEVERAL SUBDIVISIONS.

(1) *The United Free Church of Scotland* was formed by the Union on October 31st, 1900, of the *Free Church of Scotland* and the *United Presbyterian Church*. The United Church, by rearrangement of the Synods and Presbyteries, has 12 Synods and 64 Presbyteries. The Supreme Court is the General Assembly, which meets every year at the same time as that of the Established Church. In the year ending 31 Dec., 1906, there were 1,623 congregations and 33 preaching stations. The total membership exceeded 504,000, and there were 2,420 Sunday Schools, with 244,513 scholars and 25,972 teachers. In 15 Foreign Mission Fields there are 308 European Mission Agents and 3,828 native pastors, evangelists, and teachers, including in both cases those of the Women's Foreign Mission. The income of the Church at the close of last financial year amounted to £1,028,683 5s. 3d. Offices, 1 Castle Terrace, Edinburgh.

(2) *The Presbyterian Church in Ireland*. According to the Census of 1901, the members of the various Presbyterian churches in Ireland were 443,494. The largest of these, under the superintendence of the General Assembly, consists of 36 presbyteries, 650 ministers, 567 congregations, with 106,516 communicants, 84,903 families, 8,346

Sabbath-school teachers, and 97,119 scholars. During the year 1906-1907 this branch contributed by congregational effort £207,787 for religious, charitable, and missionary purposes. The total income for the year for all purposes was £270,780. It possesses two Colleges, with power to confer Theological Degrees, comprising a staff of 14 professors, and has 31 ministerial with 6 medical missionaries in foreign parts. Clerk, Rev. W. J. Lowe, D.D., Londonderry.

(3) *The Presbyterian Church of England* has 12 presbyteries, 345 congregations, 15 preaching stations, and 85,755 members. It has a Theological College (Westminster College, Cambridge), and supports 78 missionaries abroad, including 32 women. In 1906 the amount raised for all purposes was £294,774. General Secretary, Rev. W. M. Macphail, M.A.: Financial Sec., John Leggat, 7 E. India Av., E.C. Publications Office, 14 Paternoster Square, E.C.

(4) The less numerous divisions are: *The Free Church of Scotland*, consisting of those members who did not unite with the U.P. Church; the Reformed Presbyterian Synod, the Eastern Reformed Synod, the United Original Seceders, the Secession Presbytery in Ireland, and the Synod of the Church of Scotland in England.

The Methodist Churches.

UNDER the general designation of METHODISTS are included all those religious bodies which owe their existence, directly or indirectly, to the efforts of the Revds. John and Charles Wesley. The most numerous and influential of them are—

Wesleyan Methodists, the original body founded in 1739 by these two brothers. The first Conference, consisting of six clergymen and four laymen, was held in 1744. The conference is now composed in its Representative Session of 300 ministers and 300 laymen, with a ministerial president and secretary at its head, elected year by year. The Wesleyans are governed primarily by the Conference, secondarily by the Synods, which are semi-annual meetings of the ministers and selected laymen in each district, over which a chairman is appointed by the Conference, and 14 quarterly meetings of the ministers and lay officers of each circuit. The authority of both these last meetings is subordinate to the Conference, which has the supreme legislative and judicial power in Methodism. When Wesley died the number of members was 76,968, and

since then the increase has been so great that about 18,000,000 people are now receiving Methodist instruction in various parts of the world. At Washington, in October, 1891, it was reported that there were more than 30,000,000 Methodists. This statement has been recently repeated by leading Wesleyans; but no evidence is forthcoming to establish its accuracy, which is more than doubtful. Pres., Rev. John S. Simon; Sec., Rev. J. Hornbrook.

Various distinct bodies of Methodists have been formed, the most important being—

1. *The Primitive Methodists*, who sprang up in Staffordshire, in 1810, under the leadership of Hugh Bourne and William Clowes. Owing to the excesses attending certain outdoor services called "camp meetings" the Wesleyan Conference prohibited the continuance of the practice. Bourne and Clowes refused to comply with this decision, and were in consequence expelled. They and their sympathisers banded together in a new body, with enlarged powers for the laity. Next to the Wesleyans they are the most numerous of

all the denominations which have arisen out of the Methodist movement. — *President*, Rev. Henry Yool.

2. *The Methodist New Connexion*, which was formed in 1797 by the Rev. Alexander Kilham, one of the early itinerating Wesleyan preachers. He demanded that the members of the societies, and not the Conference, should be constituted the source of all power in Methodism; and that the Conference should consist of lay as well as ministerial members, all of whom should be elected by the members of the various societies as their delegates. He was expelled by the Conference and at once founded a new community.

3. *The Bible Christians*, founded in 1815 by William O'Bryan, a Wesleyan lay preacher in Cornwall. They exist principally in the West of England.

4. *The United Methodist Free Churches*, which are an amalgamation of three different secessions—the Protestant Methodist, formed in 1828; the Wesleyan-Methodist Association, which sprang out of a controversy in 1834, concerning the training of ministers; and the Wesleyan Reform Association, founded in 1849, during a great agitation. A strong opposition to leading Wesleyan officials was organised, which found expression in the Conference debates, but more strongly in anonymous pamphlets, on suspicion of being the authors and circulators of which three ministers were expelled. They found so many sympathisers that over 100,000 members seceded to found a new denomination.

United Methodist Church.—The three latter denominations—the Methodist New Connexion, the Bible Christians, and the United Methodist Free Churches—secured an Act of Parliament in 1907 to authorise their union into one denomination, to be called the United Methodist Church, and to provide for the government of the Church by a Conference consisting of an equal number of ministers and laymen, elected by district. The act of union took place in London on September 17, 1907, when the first united Conference was held. About 700 delegates were present. A deed was adopted and signed, declaring the terms of union, defining the constitution and doctrinal tenets, and containing provisions for government and discipline. It was decided to raise a fund of 100,000 guineas to commemorate the union.—*President*, Rev. E. Boarden; *Secretary*, Rev. G. Packer.

Finances.—The Wesleyans raised in 1906–1907 £208,307 to sustain their very extensive missionary operations. At the same time their Home missionary income was £38,223; and £12,497 was expended for the training of candidates for the ministry, of whom there are 253 in the four theological colleges. By the *Methodist New Connexion* the following sums were raised: For chapel fund, £899; for missions, £5,589. The *Primitive Methodists* raised £44,932 for new chapels, and the *United Methodist Free Churches* £17,492 for their missions.

The number of Members is for the United Kingdom; of Chapel and Scholars, Great Britain only.

Other Religious Denominations.

The INDEPENDENTS, or CONGREGATIONALISTS, in England come next to the Methodists; they are the most ancient community of Dissenters. They maintain that each church is its own ruler, and thus dispense with both episcopacy and presbyteries. They first appeared in the time of Elizabeth, under whom they were very harshly treated; in consequence great numbers repaired to North America; but their principles triumphed under the Commonwealth. In 1831 the majority of their churches were formed into the Congregational Union of England and Wales, incorporated in 1902. There are 51 county and other Associations in England and Wales, with 4,671 churches and preaching stations containing 1,686,780 sittings; the number of ministers in the British Isles is 3,181. Of these 264 are temporarily without pastoral charge, 80 are engaged in collegiate and tutorial duties, 42 are occupied in secretarial work, and 362 by reason of age or ill-health have retired from pastoral duty. CHAIRMAN, 1908, Rev. E. W. Thompson, D.D. Office, Memorial Hall, Farringdon St.

The *Countess of Huntingdon's Connexion*, with 44 chapels and mission stations, is governed by nine trustees assisted by an annual conference of ministers and delegates. Sec., E. Dolby Shelton. Offices, 38 Eldon Street House, London, E.C.

The BAPTISTS are, in all respects but one, similar to the Independents; they have the same form of Church government, and differ but in

one point of practice—viz., the Baptism by immersion of believers only. Like the Congregationalists, they are for the most part grouped in Associations of churches, and the majority of these belong to the Baptist Union, which was formed in 1833. In the British Isles there were, in 1906, 4,021 chapels and 2,134 pastors. The members numbered 434,741, Sunday-school teachers 58,058, and Sunday scholars 590,321. In the U.S. they form one of the most numerous religious bodies, the "members" alone numbering nearly 7,000,000. Their missionaries are employed in India, Ceylon, China, Palestine, the West Indies, Africa, Brittany, and Italy. Office, Baptist Church House, Southampton Row, London, W.C.

The WELSH CALVINISTIC METHODIST CONNEXION is the only Church of purely Welsh origin and embraces a very large section of the Welsh speaking population. The form of Church government is presbyterian, and the Church is in federation with the United Free Church of Scotland and with the Presbyterian Church of England, &c. At the present time the body numbers—churches, 1,428; chapels and places of worship, 1,641; ministers and preachers 1,239; deacons, 6,179; communicants, 187,768; on probation, 2,421; Sunday-school teachers, 27,895 scholars and teachers, 221,494; number belonging to the congregations (including communicants) 347,785. A sum amounting to £300,912 was col-

lected for various religious purposes in 1906. One of the features of the Welsh churches is the Sunday-school, which is attended by adults as well as children; the vernacular is the language generally used in these schools. There are 283 English congregations with 27,653 communicants; all the rest are Welsh. MODERATOR of General Assembly, 1907-1908, Rev. John Roberts, D.D. (India). Sec., Rev. J. Owen Thomas, M.A., Menai Bridge. Statistical Secs., Rev. J. Evans, Denbigh; and Rev. T. J. Morgan, Garn, near Aberystwith.

THE SALVATION ARMY is one of the most recent religious denominations, and one of the most successful. In Aug., 1907, the number of Officers, Cadets and Employés was 21,025, of Corps and Outposts 8,055, Local Officers 56,162. The number of countries occupied was 54, and of languages used 28. Connected with the Salvation Army are numerous philanthropic institutions under various denominations, including 125 Rescue Homes for Fallen Women, 137 Slum Posts, 17 Prison-Gate Homes, 193 Shelters and Cheap Food Depôts for the Homeless, 124 Workshops and Factories, 45 Labour Bureaux, 15 Farm Colonies, &c. GENERAL, William Booth.

MINOR RELIGIOUS DENOMINATIONS.—The chief are the Unitarians, with about 350 ministers, 345 chapels, and other places of worship. The Society of Friends, which consists of 18,677 members in Great Britain and Australasia, and 2,521 in Ireland, has 424 recorded ministers, including over 150 women; their places of worship, in

1906, numbered 421. The Friends support their own poor. Central Office for Great Britain, 12 Bishopsgate St. Without, E.C. Ireland has a separate organization, with Office, 6 Eustace Street, Dublin. The Churches of Christ have 14,277 members and 186 churches in the British Isles, with 159 Sunday Schools, 1,719 teachers and 16,811 scholars. The Moravians (Offices, 32 Fetter Lane, E.C.) have about 50 congregations and preaching stations. The Catholic Apostolic Church have above 80 churches; the New Jerusalem Church (Swedenborgians), 75 societies, with 6,063 registered members; the Latter-Day Saints (Mormons) have 82 churches. Among the inhabitants of the United Kingdom are about 196,000 Jews, mainly in London and other large towns, who possess 200 synagogues, with about 200 ministers and readers (Chief Rabbi, Dr. Hermann Adler, Chief Rabbi's Office, Finsbury Square, E.C.). The Jews support their own poor, and raise about £150,000 annually for religious and benevolent purposes. Their number throughout the world is computed at various totals, ranging between 8 and 9 millions. The Brethren, or Plymouth Brethren, have 23 places of worship in London and the suburbs. The Greeks have churches in London, Manchester, and Liverpool. The Armenians have churches in London and Manchester; the French, Dutch, Swedes, and Swiss in London, Norwich, and Canterbury; and a mosque has been opened for Moslems.

The Roman Catholic Church.

IN England, from 1623 to 1850, Catholics were under Bishops, as Vicars-Apostolic, with first 1, then 4; and afterwards 8 Districts or Vicariates; in 1850 the Hierarchy was restored, by the erection of 1 Archbishop and 12 (now increased to 15) Episcopal Sees. In Scotland Catholics were under Bishops, as Vicars-Apostolic, from 1604 to 1878, with first 1, then 2, and afterwards 3 Districts or Vicariates; in 1878 the Hierarchy was restored, by the erection of 2 Archbishop and 4 Episcopal Sees. In Ireland the Hierarchy consists of 4 Archbishop and 23 Episcopal Sees.—Besides the United Kingdom, Hierarchies are established in British America, India, and Australasia. There are now in the British Empire 30 Archbishop and 107 Episcopal Sees, and 34 Vicariates and 12 refectures Apostolic. Including 2 Delegates Apostolic, 8 Coadjutors and 7 Bishops Auxiliary, the rebishops and Bishops now holding office in the British Empire are 184, distributed as follows:—

THE University of London was first incorporated by Royal Charter on November 28th, 1836, purely as an examining and degree-conferring body, with certain affiliated colleges, supplemental Charters being granted in 1850, 1858, and 1878. The University was reconstituted in 1900, and has now an "Academic" Department for the organisation and control of higher education in its various constituent "Schools" and other Institutions throughout London, as well as an "External" Department for the continuation of its old functions of examining and conferring degrees upon students throughout the country and in all parts of the Empire. There is also a department for "the Extension of University Teaching," which supervises the organisation of "Local Lectures," i.e., University Extension, and the Inspection and Examination of Schools.

"Since January 1, 1907, University College,
 which was by the Statutes of 1900 made a
 'School of the University' in the Faculties of
 Arts, Laws, Medicine, Science, Engineering, and
 Economics, has been transferred to the Univer-
 sity, of which it now forms an integral part.
 Matriculated students working at the College in
 any of these Faculties (in Medicine up to the In-
 termediate standard only) are 'Internal Students
 of the University.' Other Institutions maintained
 directly by the University are the Physiological
 Laboratory in the University buildings at South
 Kensington, and Goldsmiths' College at New
 Cross."

A LIST OF THE SECONDARY SCHOOLS OF GREAT BRITAIN AND IRELAND, WITH THE NAMES OF THE HEAD MASTERS.

THE HEAD MASTERS' CONFERENCE (*Secy.*, W. A. Evans, 12 King's Bench Walk, Temple, E.C.). The object of the Conference is the discussion of educational questions which affect such schools as are in close connection with the Universities of Oxford and Cambridge. The annual meetings are, as a rule, held in December, alternately (a) at some school represented on the Conference, (b) at London or some University town. The admission of schools to the Conference is decided by the committee, and in considering applications the committee has regard to the scheme or other instrument under which the school is administered, the numbers in the school, and the number of resident undergraduates of Oxford and Cambridge educated at the school. As a general rule there should be 200 boys at least in any school represented at the Conference,

and about ten resident undergraduates at the Universities who have gone direct from the school. The Universities Joint Committee meets terminally to consider matters of joint interest to the Universities and Public Schools.

THE INCORPORATED ASSOCIATION OF HEAD MASTERS (*Asst. Secy.*, H. Bendall, M.A., 37 Norfolk Street, Strand, W.C.).—The qualification for membership is the holding of the head mastership of a day school for boys, the school being (a) recognised by the Board of Education as Secondary; (b) administered under a definite form of public or corporate control (e.g., Board of Education Scheme); (c) managed by a governing body which has powers both to control the school finances and to appoint and dismiss the head master.

The * denotes membership of the Head Masters' Conference; the §, of the Incorporated Association of Head Masters.

THE BANKERS' CLEARING-HOUSE, in Post Office Court, Lombard Street, is the medium through which Bankers obtain the amount of Cheques and Bills in their hands for collection from other Bankers. The amount passing through this channel is enormous. The total for the year ending December 31st, 1906, was £12,711,334,000, an increase of £423,399,000 as compared with the year 1905, and the largest amount yet recorded. On Stock Exchange days the payments were £2,031,382,000, a decrease of £39,040,000 on the year 1905. The payments on Consols account days for the same period amounted to £644,534,000, an increase of £5,751,000 as compared with 1905, and on the 4ths of the months the payments for 1906 amounted to £524,816,000, an increase of £27,746,000 as compared with 1905. The establishment is managed by a Committee of Bankers—*Chairman*, The Rt. Hon. Lord Avebury, F.R.S.; *Deputy Chairman*, Sir Felix Schuster, Bart.; *Hon. Sec.*, R. Martin Holland; *Acting Managers*, P.W. Matthews (*Chief Inspector*); A. E. Salt (*Deputy Inspector*).

* The total area of the British Empire is nearly 11,400,000 square miles, with a total population of about 410,000,000. The known surface of the globe is estimated at 55,000,000 square miles, and its total population is believed to be about 1,800,000,000; so that the British Empire occupies approximately 21 per cent., or more than one-fifth, of the earth's surface, and its population is in the proportion of 22 per cent., or over one-fifth, of the inhabitants of the globe. The total revenue exceeds £400,000,000, the debt totals over £1,500,000,000, and the trade exceeds £1,600,000,000. Railways to the extent of 90,000 miles have been opened, and 12,160,000 net tons of shipping sail under the British flag, while nearly 265,000,000 tons enter and clear annually at British ports.

(1) The United Kingdom consists of the Kingdom of England, the Principality of Wales (A.D. 1284), the Kingdom of Scotland (A.D. 1603), and the Kingdom of Ireland (A.D. 1801), with a total area of 121,377 square miles, and an estimated population of 44,100,231.

(2) The Empire of India extends over a territory larger than the Continent of Europe without Russia, and with its dependencies occupies a total area of 1,900,000 square miles, with a population estimated at 300,000,000.

(3) The Imperial Dominions beyond the Seas include:

EUROPE. The Isle of Man and the Channel Islands, Gibraltar, Malta, and Cyprus.

ASIA. The Island of Ceylon and its dependencies, the Straits Settlements, the Federated Malay States, Hong Kong and Weihaiwei, with portions of the Island of Borneo and the Island of Labuan, in the Eastern Archipelago.

AFRICA (excluding the "occupied" Ottoman Province of Egypt and the jointly "protected" Sudan Provinces). There are in the West, the Gambia, Sierra Leone, the Gold Coast Colony, Lagos and Southern Nigeria with the Protectorate of Northern Nigeria; in the South and South-East, the Cape Colony, Basutoland, the Bechuanaland Protectorate, the Transvaal, the Orange River Colony, and Natal, with the Territories of the British South Africa Company, commonly known as Rhodesia, which form a connecting link between the South and the Protected Territories in the East and Centre

of the vast Continent, which are known as the East Africa, With, Uganda, Zanzibar, Nyasaland, and Somaliland Protectorates. About 500 miles east of Madagascar lie the island of Mauritius, with its dependencies, and the Seychelles Islands.

NORTH AMERICA.—The Dominion of Canada, which extends over the whole of the northern portion of North America, except Alaska in the North-West, and contains an area of nearly 3,750,000 square miles, with about 5,530,000 inhabitants, and the Island of Newfoundland, with 40,000 square miles and 200,000 inhabitants, occupy the greater portion of the northern half of America. The West India Colonies of Jamaica, Turk's and Caicos Islands, Bahamas, the Leeward and Windward Islands, Barbados, and Trinidad and Tobago, have a total area of nearly 12,000 square miles, and a population of about 1,360,000.

SOUTH AMERICA. On the mainland, British Guiana and British Honduras; with the detached islands of Ascension, Falklands and dependencies, and St. Helena.

AUSTRALASIA. The Commonwealth of Australia consists of the Island Continent of Australia and the Island of Tasmania. The Dominion of New Zealand, the Fiji Islands, a portion of New Guinea, and certain Protected Islands in the South Seas, contribute to a total area for the Australasian Dominions of approximately 3,774,000 square miles, and contain a population of nearly 5,000,000.

* An enlarged edition of WHITAKER'S ALMANACK, containing the whole of the Popular Edition, together with a supplement devoted to the Imperial Dominions, Foreign Countries, Sport, Additional Astronomical Tables, Shipping and Railways, Holiday and Health Resorts, County and Municipal Directory, &c., is also published, neatly half-bound, 792 pages, price 2s. 6d. net. (See Table of Contents, p. 470.)

Population of the United Kingdom.

329

PREVIOUS to 1801 there existed no official return of the population of either England or Scotland; nor was it till 1813 that statesmen had anything more than surmise to guide them respecting Ireland, and the census then taken of that country was far from correct. The estimate formed of the English population at various periods, calculated from the numbers of baptisms, burials, and marriages, was in the years—

1570.....4,160,221	1670.....5,773,645
1600.....4,811,778	1700.....6,045,008
1630.....5,600,517	1750.....6,517,035

During the eighteenth century, manufactures

attracted the rural population to towns, in consequence of which many villages were comparatively deserted. The American War and the French Revolutionary War carried off large numbers of men; and this, coupled with the removal of the rustic population, gave rise to the impression that the inhabitants of the country had decreased, and were rapidly decreasing. The first general Census in 1801 dispelled this idea, and showed that, notwithstanding all drawbacks, there were many more people than anyone supposed. Since the time named there has been a fresh numbering every ten years, with the following results:

§ Decrease.

From the above figures it appears that the population of the United Kingdom including Islands in the British Seas in 1901 shows an increase of upwards of 3,725,000 when compared with the population in 1801, and the number of inhabited houses an increase of 900,000.

IN the following table the Population and Birth and Death Rates for the year 1906 are shown for some large towns in the United Kingdom and in different parts of the globe. The population of each town in the United Kingdom (with the exception of certain Irish towns) is estimated to the middle of 1906.

THE BUDGET, 1907-8.

In the Financial Statement or Budget for the Year 1907-1908 (1 April to 31 March), introduced by the Chancellor of the Exchequer on 18 April, 1907, the Revenue was estimated at £144,190,000 on the existing basis of taxation, and the Expenditure at £140,757,000, leaving an estimated Surplus of £3,433,000. The sum of £1,500,000 was therefore added to the Sinking Fund, and £200,000 set aside for Educational grants, while a reduction was proposed in the tax on earned incomes which would account for a loss of £2,000,000, leaving an estimated deficit of £267,000. This was to be met by an increase in the Death Duties to bring in £600,000. The final figures were adopted at £142,790,000 for Revenue, and £142,457,000 for Expenditure, leaving a Balance of £333,000 for contingencies. The Revenue in 1906-7 exceeded the Budget estimates by £2,059,000, the Receipts from Taxes showing an increase of £1,900,000 (Customs + £700,000, Excise + £150,000, Estate Duties + £1,200,000, Stamps - £200,000, Land Tax + £10,000, and Property and Income Tax + £100,000). The non-tax Revenue was £159,000 more than the Budget estimate. These increases made the final receipts of Revenue, 1906-1907, £144,814,000, leaving a realised surplus of £2,386,000.

The naval expenditure of the British Empire on sea-going force in 1906-7 was £31,870,000, of which the U.K. contributed £31,438,600. The aggregate gross tonnage of the Mercantile Marine protected thereby was 16,381,850 (U.K.) and 1,229,246 (India and Colonies), total 17,611,095 gross tons, which carries the annual value of nearly £1,500,000,000 (including bullion and specie). The naval expenditure is therefore 2·13 per cent., if regarded as a premium for insurance. Other nations spend as follows (in millions of £) — U.S.A., 25·1 to protect 4,241,590 tons of Mercantile Shipping; Japan, 5·2 for 1,000,000 tons; Russia, 12·4 for 913,133 tons; Germany, 11·4 for 3,810,353 tons; and France, 12·8 for 1,741,195 tons.

THE INCOME TAX.

A TAX on Income was first imposed by Pitt in 1798, in order to meet the expenses of the French War, and at the conclusion of peace in 1801 it was abolished. In 1803 the Income Tax was again imposed as a Property Tax, divided into Schedules A, B, C, D, and E, as at the present time, the rate being 1s. in the £ on incomes exceeding £60, except in the case of Schedule B, where the rate was 9d. in England and 6d. in Scotland. In 1805 the rate was increased by 3d.,

and in 1807 the figures were 2s. in the £ on Schedules A, C, D, and E, 1s. 6d. on Schedule B for England and 1s. for Scotland. At the conclusion of peace the Income Tax ceased for 26 years (1816-1842), to be re-imposed by Sir Robert Peel on June 22, 1842, at the rate of 7d. in the £ on all incomes exceeding £150. In 1842 the tax produced about £5,000,000, or about £710,000 per *rd.* of tax; and in 1906-7 the yield was £31,600,000, or £2,633,000 per *rd.* of tax.

The National Debt.

337

THE NATIONAL DEBT amounted on 31 March, 1907, to £774,164,704 Gross and £731,163,418 Net, being at the rate of £16 11s. 7½d. per head of the population of the United Kingdom; the annual cost for 1906-7 being £28,500,000, or 13s. 0d. per head. This amount is mainly the remnant of the growth of many years, and nearly all was raised for foreign wars. There was a trifling sum of £664,263 until the "Glorious Revolution" of 1688, which added nearly £16,000,000 to the Debt. Under Queen Anne the campaigns of the Duke of Marlborough added nearly £38,000,000, part of which was paid off in the time of George I. In the reign of George II. about £87,000,000 were added, but the first twelve years of George III. saw £10,000,000 of this paid off. The American War added £121,000,000, making the total nearly £250,000,000, which was reduced considerably until 1793, when the repayments ceased owing to the outbreak of the French Revolutionary War. In twenty-three years, £601,500,343 were added to the debt for the purposes of the war, the following amounts being raised:—

Year.	£	Year.	£	Year.	£

The amount of the Debt in January, 1816, capitalised in the manner adopted since 1835, was £900,436,000 (Funded, £816,312,000; Unfunded, £44,727,000; Annuities, £39,397,000), the annual charge being nearly £33,000,000. With peace secured, efforts were made to reduce the Debt, and the following amounts were paid off from 1817-1837:—

Year.	£	Year.	£	Year.	£
1817...	1,826,814	1824...	7,456,559	1831...	2,673,858

At the accession of Queen Victoria the amount stood at nearly £788,000,000, with an annual charge of £29,000,000. Small sums were paid off annually from 1837-1854, when the Russian War

added £33,000,000 to the Debt. Repayments were made from 1858 onwards, with slight increases in 1868, 1875, 1878, 1879 and 1886, the following being the actual amounts paid off:

On 31 March, 1899, the gross total was £635,040,965, being a decrease since the accession of Queen Victoria of £153,000,000. The war in South Africa and the military operations in China together accounted for an increase in the gross amount of £149,482,000, the balance of cost (£67,684,000) being contributed by Revenue. In the financial years 1905 6 and 1906-7 the sum of £22,571,784 was paid off.

The total gross Debt on 31 March was as follows in 1906 and 1907:—

Imports and Exports Classified (1902-1906).

The tables on pages 341, 342, and 343 show the value of British Imports and Domestic Exports for the last five years, differentiating Imperial and Foreign customers, and summarising the merchandise into the four main headings of Food, Drink and Tobacco, Raw Materials, Manufactures, and Miscellaneous. The values are as ascertained by the Board of Trade, and represent in the case of Imports the full value (what is known as "C.I.F."), i.e., cost, insurance and freight, or if sent on consignment the sale value at the date of entry; in the case

of exports the term "Domestic" includes only British and Irish produce or manufactures, and the values are those known as "F.O.B.," i.e., cost and charges for delivery on board the ship.

It must always be borne in mind that Imports have two values—F.O.B. when they start and C.I.F. when they arrive, the latter being the free on board, or cost, plus insurance and freight. Similarly, exports scheduled with their F.O.B. values as above are enhanced in value (= C.I.F.) by the time they are landed.

THE BRITISH ISLES.

THE British Isles, including the United Kingdom of Great Britain and Ireland, the Isle of Man and the Channel Islands, lie between the 48th and 61st degrees of N. latitude, and the 2nd degree of East and the 11th degree of West longitude. The total area is 77,683,084 acres, or 121,377 sq. miles, with a population in 1907 of 44,100,231. In 1906 there were 1,169,770 births (26·8 per 1000), 680,725 deaths (15·6 per 1000), and 325,414 marriages (14·9 per 1000) in the United Kingdom. The average strength of the Armed Forces of the United Kingdom was 903,404 officers and men in 1906, and the Police numbered 62,606. The number of Immigrants was 230,165, and of Emigrants 557,737, in 1906. The number of Paupers and Dependents in Jan. 1907 was 1,119,921, and 14,289 Criminals were convicted in 1906. There were in 1906 40,995 registered Joint Stock Companies trading in the United Kingdom, the paid-up capital amounting to £2,003,392,001, and 1,939 incorporated Building Societies, with liabilities of £54,343,184 (exclusive of 60 unincorporated societies, with liabilities of £16,005,813). There were also 2,244 Industrial and Provident Societies, with 2,275,912 members, having a share capital of £29,323,584 and a sales total of £95,988,908. In 1906 there were 30,002 applications for Patents, of which 14,707 were sealed, and 4,731 Trade Marks were registered. With regard to Insolvency, 4,823 persons were adjudicated bankrupts in 1906, with total liabilities £8,429,470 and assets £3,894,847. In 1905 sailing and steam vessels numbering 329 were totally lost, their tonnage being 131,686, and 898 lives were lost, of whom 122 were passengers and 776 crew. Of the total area, 47,195,879 acres were under cultivation in 1906, 8,392,165 acres being under corn crops, 4,139,033 under green crops, 27,446,739 other crops, grass, permanent pasture, etc. The live stock included 2,110,024 horses, 11,691,955 cattle, 29,210,035 sheep, and 3,580,740 pigs; 60,618,442 bushels of wheat, 64,479,688 bushels of barley and bere, 174,872,611 bushels of oats, were grown in the United Kingdom, while 92,967,200 cwt. (about 185,934,400 bushels) of wheat and 14,190,300 cwt. of meal and flour were imported in 1906.

ENGLAND

may be roughly said to be divided from Scotland on the north by the Cheviot Hills and the rivers Tweed and Solway, and from Wales by the Severn and Dee. Except in the west and the north, England is for the most part a level country, so cultivated as to be highly productive. The other districts have mineral riches, including iron, tin, lead, zinc, slate, and coal, which make abundant amends for the poverty of their surface.

The southern and eastern parts of England have a population mainly derived from Belgic Gaul, whilst the western districts and Wales have been peopled from the West of France and the North of Spain; while Ireland and Scotland are believed to have been peopled by a race originally Belgic. When the Romans first came to our shores the inhabitants might have been roughly divided into two sections: those who lived inland, and who may with some reason be called Celtic colonists, were a race of hunters and shepherds, dressed in the skins of beasts, and inhabiting huts made of rude wickerwork and covered with rushes; whereas the coast-dwellers were, probably, of Gallic origin, with some approach towards civilisation, and holding intercourse, for purposes of trade, with foreign merchants visiting the island. Neglecting the Romans, who were no more than mere military garrisons, and mingled little with the natives—much like Europeans in the East at the present day—we have the Saxons and Jutes established from Kent to Devonshire, and the Angles (and subsequently the Norsemen) from the Thames to the Tweed. The Norman Conquest brought in a mixed multitude from the Continent; the wars of Stephen introduced a numerous body of Flemings, who were settled by Henry II. in Wales; and the commercial views of Edward III. led to the establishment of a still larger body of the same people as clothworkers in Kent. The west of England was known to the Phœnicians, and was resorted

to by them for its tin, four centuries or more B.C.; hence the whole country received the name of the Cassiterides, or Tin Islands. When invaded by Cæsar (B.C. 55) it was called Britain (perhaps derived from Prydain, the name of an early chief of great power), or sometimes Albion, that is, the *White Land*, from the white cliffs on the S.E. coast.

Occupations (1901).—Of the 12,134,259 males of 10 years and upwards in England and Wales in 1901, 1,071,040 were engaged in Agriculture, 1,042,864 in Building and Works, 774,291 in Food, Tobacco, Drink and Lodging, 640,989 Coal and Shale Mine Workers, 626,263 Engineering and Machine Making, 548,190 Dock, Coal and General Labourers, 430,645 Road Conveyance, 351,911 on Railways, 311,618 Professional, 307,889 Commercial or Business Clerks, 233,000 Wood, Furniture, Fittings and Decorations, 229,123 Tools, Dies, Arms and other Metal Trades, 222,796 Merchants, Agents, Accountants, Banking and Insurance, 196,898 Cotton Manufactures, 184,081 Boot and Shoe Trades, 180,496 Messengers, Porters and Watchmen, 179,932 Domestic Outdoor Service, 171,687 General or Local Government, 168,238 Defence, 131,429 Seas, Rivers and Canals, 130,731 Precious Metals, Jewels, Watches, Instruments and Games, 124,263 Domestic Indoor Service, 119,545 Tailors, 115,083 Cycles, Coaches and other Vehicles, 111,081 Drapers, Mercers and Dress, 107,170 Printers and Lithographers, and 101,938 Chemicals, Explosives, Oil, Grease and Soap Makers. Of females, 3,254,242 unmarried and 917,509 married, aged 10 and upwards, were occupied, 1,330,783 being in Domestic Indoor Service, 340,582 Dressmakers, 332,233 Cotton Manufactures, 196,141 Laundry and Washing, 172,873 Teaching, 142,687 Food and General Shopkeepers, 122,068 Woollen and Worsted Manufactures, 117,640 Tailoresses, 111,841 Charwomen, and 95,900 Staymakers, Shirtmakers and Seamstresses.

STATISTICS OF ENGLISH COUNTIES.

THE following tables show the Area and Population of each County* in England and Wales according to the Census of 1901, the Rateable Value as settled by the Assessment Committees in the Valuation Lists in 1906, the amount of Rates received by Boards of Guardians of Poor Law Unions in each county for their own purposes (i.e. excluding county contributions) during the year ended Lady Day, 1906, together with the number of Paupers who were actually in receipt of relief on Jan. 1st, 1907.

The total population of England and Wales in 1901 was 23,527,843, as compared with 29,002,525 in 1891. The total number of Paupers receiving relief on Jan. 1st, 1907, was 920,838, being a decrease of 5,903 when compared with the previous year. The total cost of Relief to the Poor for the year ended Lady Day, 1906, excluding the expenditure of the Metropolitan Asylums Board in connection with hospitals for infectious diseases, was £14,050,262.

The total amount of Rates received by Boards of Guardians in England and Wales for their own purposes during the year ended Lady Day, 1906, was £12,268,933, as compared with £11,839,847 in the previous year. This was equivalent in 1906 to a rate of 1s. 3½d. in the £ on Assessable Value or 7s. 2½d. per head on estimated population. The receipts in aid of these Rates, inclusive of grants from County and Borough Councils, and grants under the Agricultural Rates Act, 1896, amounted to nearly £3,800,000. The gross cost of Relief to the Poor for the year ended Lady Day, 1906, amounted to 8s. 2½d. per head of the estimated population. (For statistics and other particulars as to Wales, see next page.)

† Received by Boards of Guardians for their own purposes.

THE Principality of Wales, with an extreme length of 135 miles and a breadth varying from 35 miles to 95 miles, lies in the S.W. of Great Britain, and has an area of 7,370 square miles, or about 4,716,000 acres. The Principality is rich in minerals; slate, coal, and iron being among the more important; while of its manufactures, flannel, cloth, and hosiery alone are worthy of mention. The native inhabitants are almost wholly of the Cymric stock of the Celtic race; and a large number of them belong to the religious body known as the Calvinistic Methodists.

At what time Christianity was introduced it is impossible to tell, but certainly not later than A.D. 400. When the British Christians were driven from their homes, such of them as did not seek refuge beyond the seas found in the rocky fastnesses of the Welsh mountains a secure retreat from their enemies. There they immediately set about dividing the country into ecclesiastical divisions for administrative purposes, and the present sees of Wales represent those leading centres of religious thought that became famous in the sixth century.

The four bishoprics still remain as of old, and the numbers of beneficed clergy now to be found in them are as follows: St. David's, 360; Llandaff, 246; St. Asaph, 206; and Bangor, 147. The sees of St. David's and Llandaff were united with the Southern province in the year 1107, and those of Bangor and St. Asaph in the years 1092 and 1143 respectively.

When the Saxon pirates began to visit and ravage the eastern shores of Britain, the Celtic inhabitants were gradually pressed westward by the invading hordes, and finally found secure shelter in the wilds of Wales, Devon, and Cornwall. The border-lands, or marches, between England and Wales were long in a state of at least guerilla warfare; and it was not until about 850 A.D. that one Roderick (Rhodi Mawr) contrived to unite the whole country into one Principality, dividing it afterwards among his sons into three smaller ones, named, severally, Gwynedd, Dyfed and Ceredigion, and Powis. This was followed by the incursions of the Danes, after which Howel once more (in the 10th century) succeeded in reuniting the country. Later, when England was tending in the same direction of unity, Athelstane received a tribute from the Welsh in recognition of his nominal sovereignty over them. William I. and his son Rufus both tried the plan of granting fiefs to their more

adventurous Norman knights, on condition of their conquering the land, while Henry I. introduced into the Principality a colony of Flemish wool-workers. Henry II., too, and John, endeavoured, with doubtful success, to effect a final subjugation of the troublesome province. A combination of fortuitous circumstances led to its lasting conquest. Llewellyn, who succeeded David, had been implicated in the Montfort rebellion, but, on the accession of Edward I., managed to get included in the general amnesty granted to those who had joined the Leicester faction. In 1276, however, Edward, having been repeatedly refused the homage due to him from Llewellyn, raised an army to enforce his commands. Internal dissensions among the Welsh greatly aided the English, and Llewellyn, at length cooped up and almost starved to death among the Snowdon mountains, was forced to submit at discretion, and accept the terms offered by the victor (1277). By the grace of Edward the Welsh prince was allowed to return to the Principality; but trouble arising again, in which both Llewellyn and his brother David were concerned, a war arose, and the independence of Wales was for ever shattered. Llewellyn was slain in battle in 1282, with two thousand of his followers; and in the following year David, being betrayed to the English, was sent in chains to Shrewsbury, and at last put to a painful and ignominious death as a traitor. The Welsh nobility then submitted in a body, and King Edward invested his son Edward (who had been born at Carnarvon) with the Principality, which very soon afterwards was fully annexed to the Crown. In later days the history of Wales has been almost identical with the history of England, the Principality and Country marching side by side in sure and steady progress.

In education the Principality has made great strides of recent years, and possesses a University (Prifysgol Cymru), consisting of the three university colleges of Aberystwyth, Bangor, and Cardiff, in addition to St. David's College at Lampeter.

The following table of statistics contains some interesting information with reference to the various individual counties of Wales. In addition to those named, Monmouth is, not without good reason, claimed as a Welsh county; if admitted, it would add over a quarter of a million to the population of the Principality, thus making it larger than that of Scotland in the early part of the last century. The Welsh is a distinct nationality, with a language and literature of its own.

THE most northerly part of the island, divided from the south by the River Tweed, the Cheviot Hills, and the Solway Firth, is the ancient Caledonia or modern Scotland, a mountainous country, and to a great extent bleak and barren, but inhabited by a race of men who have made the country productive, wealthy, and prosperous. It contains nearly 30,000 square miles, or 19,069,500 acres, of which not quite 4,500,000 are in a state of cultivation, with a population in 1881 of 3,735,573, of 4,025,647 in 1891, and of 4,472,103 in 1901.

In the Highland regions the crofters carry on a primitive system of farming, and the distilling of whiskey is a typical industry. Sheep farming is carried on, but a great part of the land is preserved for deer. The South Eastern Highlands contain granite in profuse quantities, and supply at Aberdeen a famous breed of cattle for the London market. In the Northern Lowlands grazing, fishing and manufacture of woollens are the chief occupations. The Western, Eastern

and Mid Lowlands are immensely fertile and contain iron and coal fields. The principal industries are flax and jute (Dundee), cottons (Paisley), shipbuilding and engineering (Glasgow and Greenock), dyeworks (Perth), and printing and brewing (Edinburgh). The product of the sea fisheries amounts annually to about £2,300,000, and over 30,000,000 tons of coal were raised in Lanarkshire and the other mining districts in 1902, and about 150,000 hands were employed in textile industries. The annual value of the trade of Scotland is about £72,000,000, of which £39,000,000 represents the value of imports. The principal ports, with the tonnage of entries in 1906, are Glasgow (1,796,243), Leith (1,256,291), Grangemouth (651,054), Methil (810,512), Burntisland (533,907), Borrowstouness (258,807), Dundee (225,897), Ardrrossan (228,205), Aberdeen (159,515), Granton (123,181), Greenock (88,993), and Alloa (61,618).

POPULATION, AREA, VALUATION AND PAUPERS OF COUNTIES.
